**Re: BlueBeat Catalog  
Copyright Control Number: 81-525-6480**

Dear Mr. Robinson:

I write on behalf of the Copyright Office Review Board (Board) in response to your letter dated August 21, 2009, in which you requested a second reconsideration of the Copyright Office's (Office) refusal to register approximately 800,000 sound recordings simulations. The Board has carefully examined the application, the deposit and all correspondence concerning this application, and affirms the denial of registration of this work.

**I. ADMINISTRATIVE RECORD**

**A. Multiple Previous Applications**

The Copyright Office received a letter from Hank Risan dated August 15, 2007 as well as a Form SR application for registration of sound recordings entitled "Media Rights Technologies and BlueBeat.com registration of nearly 800,000 ephemeral sound recordings. See Disk," which was signed by Hank Risan. The application names Media Rights Technologies and BlueBeat.com, Hank Risan CEO, as the authors of a "list of 792,852 ephemeral sound recordings manufactured for Internet broadcast, see enclosed disk." It names Media Rights Technologies and BlueBeat.com as the copyright claimants.<sup>1</sup> The application indicates that the work was completed in 2007 and first

<sup>1</sup> As the discussion of the administrative record below reveals, it appears that you have made inconsistent assertions at various times with respect to the identity of the author(s) and copyright claimant(s) of the works in question. Because those specific identities are not pertinent to the grounds for the Board's disposition of this matter, we will refer to the author(s) and claimant(s) interchangeably as "Risan" and/or "MRT."

published on August 15, 2002. (Media Rights Technologies application dated August 15, 2007).

The Copyright Office also received a letter from Hank Risan dated September 14, 2007 as well as a Form SR application for registration of sound recordings entitled "baseBeat Compilation," which was signed by Hank Risan. The application names Hank Risan on behalf of Media Rights Technologies as the author of "compiled Compilations." The application indicates that the work is derivative. In space 6a, which provides for identification of any preexisting work or works that the applied for work is based on or incorporates, Mr. Risan stated "See attached discs comprising 2,626 compilations of a total of 796,138 sound recordings offered in two sound qualities-160kb/s and 320kb/s." The application names Hank Risan/Media Rights Technologies as the copyright claimants. It indicates that the work was completed in 2007 and first published on August 11, 2001. (Media Rights Technologies application dated September 14, 2007).

In addition to the two applications described above, the Copyright Office received three Form SR applications dated October 22, 2007 on behalf of Hank Risan and Media Rights Technologies for registration of sound recordings. The application for "BlueBeat.com Derivative Works" was signed by Hank Risan on October 22, 2007 and names Hank Risan as the author of "Approximately 800,000 Sound Recordings." The application indicates that the work is derivative. In space 6a, which provides for identification of any preexisting work or works that the applied for work is based on or incorporates, Mr. Risan stated "786,678 Songs." In space 6b, which provides for a brief general statement of the material that has been added to the applied for work and in which copyright is claimed, Mr. Risan stated "786,678 sounds have been digitally altered to create an entirely new sound by author." The application names Hank Risan/Media Rights Technologies as the copyright claimants. It indicates that the work was completed in 2003 and first published on January 1, 2003. (Media Rights Technologies application for "BlueBeat.com Derivative Works," dated October 22, 2007).

Applications for "For What It's Worth 7835.mp3der/320" and "For What It's Worth 7835.mp3der/160" were signed by Hank Risan on October 22, 2007 and name Hank Risan as the author of "Sound Recordings." The applications indicate that these works are derivative. In space 6a, which provides for identification of any preexisting work or works that the applied for work is based on or incorporates, Mr. Risan stated "For What It's Worth" on both applications. In space 6b, which provides for a brief general statement of the material that has been added to the applied for work and in which copyright is claimed, Mr. Risan stated "Sound has been digitally altered to create an entirely new sound by author" on both applications. The applications name Hank Risan/Media Rights Technologies as the copyright claimants. The applications indicate that the works were completed in 2003 and first published on January 1, 2003. (Media Rights Technologies applications for "For What It's Worth 7835.mp3der/320" and "For What It's Worth 7835.mp3der/160," dated October 22, 2007).

A cover letter accompanying the three applications, which was dated October 22, 2007 but was not received by the Office until December 3, 2007, appears to indicate that

the application for "BlueBeat.com Derivative Works" duplicates and supersedes the earlier applications submitted on August 15, 2007 and September 14, 2007. The letter asserts that the sound recordings addressed in the applications were made pursuant to Section 112 licenses. The letter also indicates that Media Rights Technologies ("MRT") has not obtained mechanical licenses to make and distribute phonorecords of nondramatic musical works, and that MRT wishes to obtain compulsory 115 licenses. (Letter from Risan to Copyright Office, dated October 22, 2007).

In a letter to Mr. Risan from Supervisory Registration Specialist Jane Rinard of the Copyright Office's Performing Arts Division, dated December 17, 2007, Ms Rinard indicated that the applications received on December 3, 2007 appear to duplicate and supersede the earlier claims submitted on August 15, 2007 and September 14, 2007. Ms. Rinard pointed out that applications and cover letter received on December 3, 2007 do not advance acquisition of 115 licenses and she suggested that MRT continue its discussions with the Copyright Office's Office of the General Counsel regarding compliance with the section 115 license. (Letter from Rinard to Risan, dated December 17, 2007, at page 1-2).

Ms. Rinard questioned whether Mr. Risan considered the subject sound recordings to be derivative. In doing so, she advised him of the requirement of sufficient human authorship and that the mere mechanical adjustment or changes to sounds, including the addition of locking mechanisms to protect digital sound files or content, would probably not constitute sufficient sound recording authorship. She went on to state that the Office needs a deposit copy of the sound recordings themselves, and not merely a list of titles, before registration can be considered. *Id.* at 2.

Ms. Rinard, referring to a conversation with Hank Risan, recounted Mr. Risan's statements that all of the recordings contain some sounds from the original recordings. She also recounted Mr. Risan's assertions that he obtained the necessary licenses to use and alter these sound recordings, and that he obtained the legal right to claim copyright in the derivative sounds. She then pointed out that Mr. Risan had not supplied any documentation of any such authority. She specifically asked Mr. Risan to provide written authorization or permission from the copyright owners of the original sound recordings that grants him the right to claim copyright in the derivative works. *Id.* at 3.

Ms Rinard then asked Mr. Risan to clarify the various statements of authorship in the previous applications which had listed Media Rights Technology and BlueBeat.com as the author of works made for hire, in light of the fact that the October 22, 2007 application for "BlueBeat.com Derivative Works" names Hank Risan as the author of "Approximately 800,000 Sound Recordings." She also asked for a detailed description of what the author contributed to the production of these derivative recordings, aside from any mechanical, electronic, or software-generated process. *Id.*

Ms. Rinard went on to ask Mr. Risan to clarify the various statements of first publication of the respective recordings as stated in the various applications. Ms. Rinard, referring to a conversation with Hank Risan, recounted Mr. Risan's statements that all of the "recordings were published by broadcast over the Internet. The first track FOR

works was done with the express consent of the RIAA and the International Federation of Copyright in the derivative works. Mr. Robinson stated that production of the derivative works copyright owners of the original sound recordings that grants the right to claim the copyright in the derivative works.

In response to Ms. Rinard's request for written authorization or permission from

2007. (Letter from Robinson to Rinard, dated March 24, 2008).

Specialist Jane Rinard of the Copyright Office's Performing Arts Division, dated March 24, 2008. Mr. Robinson attempted to respond to Ms. Rinard's letter of December 17.

In a letter from MRT's Counsel, Archie Robinson, to Supervisory Registration

800,000 derivative works. (Letter from Robinson to Sanders, dated February 13, 2008) Specialist regarding MRT's application for registration of copyright on approximately 800,000 derivative works to the Copyright Office's Supervisory Registration accompanied draft response to the Copyright Office's Supervisory Registration against unauthorized use by MRT's SCMS. Mr. Robinson then referred to an around the world, including the U.S., on the condition that each transmission be protected a license to transmit copyrighted sound recordings from 47,000 artists to 36 countries described as England's counterpart to Sound Exchange in the U.S., framed Bluebeam herein." Mr. Robinson added that "[t]he Phonographic Performance Limited (PPL), were produced and constitute the subject matter of MRT's application for copyright. Mr. Robinson went on to state that "[s]ome 800,000 derivative works of sound recordings MRT's technology and encoded with MRT's Serial Copy Management System (SCMS). Public Broadcasting, Inc., to make and use copies of sound recordings processed through record labels, granted express permission to MRT, which was then known as Music the Recording Industry Association of America (RIAA), on behalf of its constituent General Counsel, Tanya Sanders, dated February 13, 2008. Mr. Robinson asserted that

In a letter from MRT's Counsel, Archie Robinson, to the Copyright Office

2007 without further action unless MRT advised otherwise. Id. at 4. claims, the Office would file the claims submitted on August 15, 2007 and September 14, applications received on December 3, 2007 appear to duplicate and supersede the earlier difference being the speed of the recordings. Finally, Ms. Rinard noted that only 7835.mp3der/160" if both recordings contained the same fixation of sounds, with the two recordings of "For What It's Worth 7835.mp3der/320" and "For What It's Worth Rinard went on to state that the Office would not be able to register both claims in the two specific instructions regarding the formatting of the files prior to preparing them. Ms. Rinan asked Mr. Risman to contact the Office the recordings for examination purposes. She then asked Mr. Risman to submit that it is possible, when the Office would accept it, provided that the Office was able to access because of the volume of recordings. Ms. Rinard stated that if this is the only format that Hank Risman in which he stated that there may be a need to submit a computer hard drive

With regard to the deposit requirement, Ms. Rinard referred to conversations with

WHAT IT'S WORTH was published on 1/10/03 when it was first broadcast over the the publication status of the works. Id. sound recordings were published. been omitted).

Id. at 1-2. (footnotes, including a footnote referencing the RIAA test report, which was included as an attachment to the letter from Risian to Kinarid, dated March 24, 2008, have

limited user-creation of "Be The DJ" chapters to the United States, but "Playlists", and "Be The DJ" for global publication and transmission, but stream ripping. The PPL authorized "The Time Machine", "Killer and 47,000 artists. The PPL license defines the licensed sound recordings as those which have been processed by MRT to include SCMS to prevent PPL. In addition, the PPL warrants that it represents 3,500 record labels PPL. RIAA was and is at all relevant times a signatory member of the recordings of copyrighted sound recordings owned or controlled by the PPL as a global webcaster in 36 countries, including the U.S., ephemeral equivalent of SoundExchange in the U.S., to produce, publish and transmit licensed by the Phonographic Performance Limited (PPL) the British In 2006, BlueBeat.com, MRT's wholly owned subsidiary, was

sound recordings. 2411 chapters and also includes the entire Catalog of the subject 800,000 sound recordings. Currently, "Be the DJ" has chapters of user-organized sound recordings. Currently, "Be the DJ" contains RIAA. In 2005, MRT published "Be the DJ" in anthology containing subject 800,000 sound recordings. It, too, was evaluated and approved by Macchine." "Killer Playlists" currently contains the entire Catalog of the Catalog, was published by MRT in about the same time as "The Time "Killer Playlists", consisting of 175,000 sound recordings from the subject of the pending application. Another program anthology, entitled augmented to approximately 800,000 sound recordings which are the annually. The program now contains the entire Catalog which has been paid under MRT's § 114 license. These royalties have been accounted for the program and agreed that all performance royalties due them would be paid. The copyright on "The Time Machine" has been augmented and paid. The copyright on "The Time Machine" has been augmented visually and became a program known as "The Time Machine", an audio-chapters, that became a program covering the history of music from 300 AD to the present some 400,000 sound recordings (the "Catalog"), organized into 153 sound quality — the RIAA authorized MRT to make ephemeral copies of and copying of music stream MRT to make ephemeral copies of technical efforts. In March 2003, after testing confirmed that MRT's metered into between MRT and RIAA in February 2003. This agreement recognizes that MRT's creation of derivative works embodies substantial technological was 100% effective in preventing unauthorized download some 400,000 sound recordings (the "Catalog"), organized into 153 chapters, that became a program known as "The Time Machine", an audio-chapters, that became a program covering the history of music from 300 AD to the present some 400,000 sound recordings (the "Catalog"), organized into 153

Preparatory to demonstration and testing of MRT's proprietary SECURE SCMS, a Software Evaluation License Agreement (SELA) was entered into between MRT and RIAA in February 2003. This agreement recognizes that MRT's creation of derivative works embodies substantial technological was 100% effective in preventing unauthorized download some 400,000 sound recordings (the "Catalog"), organized into 153

sound recordings. He went on to state that:

the Phonographic Industry (IFPI), representing owners of the copyrights on the subject

"the derivative works in the program "The Time Machine" were published by MRT in 2003, and the derivative works in the "Killer Player" program were also published in the same time frame. The derivative works of "Be the DJ" were published in 2005. It is MRT's intention to register the derivative works as three published units of sound recordings."

In response to Ms. Rimard's request for a clarification as to the various statements of first publication, Mr. Robinson stated that:

"Id. at 2-3.

different SCMS - all the result of human discretion and creation. different annotations of performance and production cues and of sound, different recordings for public transmission with enhanced quality into an ephemeral recording for personal use (on Compact Disk) unprotected sound recording designed for personal use (on Compact Disk) product of human evaluation, discretion and transformation of an properly protected. ... In sum each of the claimed derivative works is unique to each sound recording so that the data within each frame is the human operator chooses a particular encryption algorithm that is frame of the digital file for each recording. ... During the encryption phase, selects the type and amount of meta-data (SCMS) to be added to each abridgement/compression/partition phase, a human operator defining individual voices and instruments. ... During the definition of individual voices and instruments, ... During the quality of sound that virtually re-creates the intended sound stage with file about one-eighth the size of the original, which contains a 3-D, spatial playback. The net result of this human re-masking is an abridged musical that are more harmonious to the ear. Human operators at MRT have through use of acoustic shaping software, transforms the sounds into those MRT's proprietary software targets elements of the digital process and,

Robinson stated that:  
inserion of new meta data and encryption algorithms. In describing these activities, Mr. Compact Disk to individual files, removal of digital noise, editing and abridgment, and of the works consisted of four activities, namely disaggregation of sound recordings from electronic, or software-generated process. Mr. Robinson indicated that MRT's production contributed to the production of the derivative recordings, aside from any mechanical.  
In response to Ms. Rimard's request for a detailed description of what the author

Hank Risian and licensed by him to MRT." Id. at 1.  
the author, in its personal right, of the claimed derivative works. They were created by authorship in previous applications, Mr. Robinson stated that "MRT seeks registration as authorship in previous applications, Mr. Robinson stated that "MRT seeks registration as

In response to Ms. Rimard's request for clarification on the various statements of

From April 14, 2008 through June 6, 2008, Ms. Rimard and Mr. Robimson corresponded through several emails regarding an acceptable format for the deposit for

Having found that there was no basis for a claim to copyright in derivative sound recordings, Ms. Binard informed Mr. Robinson that the Office was refusing to register the recordings. She pointed out that if Mr. Robinson chose to seek reconsideration of the refusal, he should, in addition to providing reasons for reconsideration, explain when and how the works were published, and provide documentation showing authority given to Mr. Risman by the copyright owners of the original sound recordings upon which the derivative works are based. Finally, she added that any request for reconsideration must include the required deposit material. *Id.* at 1-2.

In a letter to Mr. Robinson from Ms. Rimard, dated April 2, 2008, Ms. Rimard observed that the Office did not receive the required deposit material. Despite the absence of this fundamental ingredient for consideration of an application, Ms. Rimard went on to state that Mr. Robinson's March 24, 2008 letter stated that MRT is the author (presumably as the employee of Mr. Risman) and the company seeks registration in derivative sound recordings. She noted that of the four described authorship activities, derivative sound recordings, "editing and abridgement," might represent the type of authorship that could only one, "edi~~ting~~ and abridgemen~~t~~," might represent the type of authorship that could support a claim to copyright in a derivative sound recording. She noted, however, that this volume of the various recordings for playback purposes and compressing musical files -- does not represent copyrightable production authorship. She added that of the other three activities -- namely disassembly of sound recordings, removal of digital noise, and insertion of new metadata and encryption algorithms -- the first two are mechanical processes, and the last does not involve production authorship. (Letter from Rimard to Robinson, dated April 2, 2008).

Mr. Robimson did not dispute Ms. Rimard's suggestion that the applications received on December 3, 2007 duplicate and supersede the earlier claims or that the Office should file the claims submitted on August 15, 2007 and September 14, 2007 without further action. Furthermore, Mr. Robimson did not respond to Ms. Rimard's request for an explanation of the facts surrounding the publication status of the works or to her request to contact the Office regarding submission of a suitable deposit. (Letter from Robimson to Rimard, dated March 24, 2008).

In response to M's, Rinald's statement that the Office would not be able to register both claims in the two recordings of "For What It's Worth 7835.mp3der/320" and "For What It's Worth 7835.mp3der/160" if both recordings contained the same fixation of sounds, with the only difference being the speed of the recordings, Mr. Robinson stated that "For What It's Worth 7835.mp3der/320" and "For What It's Worth 7835.mp3der/160" are two separate works, "each with different encryption, different modification to the sound quality, different annotations of performance and production cues and different SCMS – all the result of human discretion and creation." Id.

The derivative works consist of atonal, cacophonyous sounds bearing no resemblance to sounds from the original recordings. To explain, as a result of MRT's transformational processing, distinct, quality-enhanced sounds from original sound recordings are embedded in the derivative works as ephemeral copies, created pursuant to BlueBeats' Section 112 license. The ephemeral copies, so made, are protected by MRT's patented technology against download or copying. After the ephemeral copies are uploaded onto BlueBeats' servers, they are transmitted and performed, pursuant to BlueBeats' Section 114 license and its interactive publishing licenses (from ASCAP, SESAC, BMI). What are transmitted from BlueBeats' servers and then fixed to the user's computer as DPPs are MP3 files containing MRT's atonal derivative works. After the initial transmission, the sounds from the original recordings no longer exist. That is, the user will have access to only the derivative works, aforementioned atoms, which will be able to listen to, publicly cacophonyous sounds. The user will not be able to listen to, publicly perform, download, reproduce or distribute any of the sounds from the original recordings.

In a July 22, 2008 email, sent prior to receipt of the hard drive deposit, Ms. Rimard asked Mr. Robinson if the recordings produced by MRT contain or capture any of the actual sounds from the original recordings. Mr. Robinson responded in a July 23, 2008 email in which he stated:

In another email to Ms. Rimard, Mr. Robinson explained that the sound recordings were first published in a proprietary digital format known as "bbi-audio." (Email from Robinson to Rimard, dated April 29, 2008).

(Email from Robinson to Rimard, dated April 16, 2008).

MRT advises that it has hard drives (5 terabyte) containing MP3 files in 320 and 169 kbs that consist of standard CD sound recordings which have been recast, re-arranged, processed and encrypted before being fixed onto the hard drives. These hard drives can be deposited with the Copyright Office together with an interface box that can be plugged into a computer which reads MP3 format. What will be heard are the sounds of the unique rearrangements created by MRT of the original sound recordings. Since MRT's encryption cannot be broken, a special authentication code will be provided via an online account that will permit the sound recordings to be decrypted and listened to. Importantly, the deposited hard drives will contain files in exactly the same condition as those transmitted by BlueBeat.com and delivered and downloaded by BlueBeat customers.

Mr. Rimard indicated that the Office will accept the hard drive described in an email from Ms. Rimard in addition to the hard drive described in an email dated May 15, 2008, the approximately 800,000 derivative sound recordings. In an email dated May 15, 2008,

(Email from Robinson to Rimard, dated September 12, 2008).

(Email from Robinson to Rimard, dated July 23, 2008, 1:36 PM).

Mr. Risman analyzed the original sound recordings and subjectively decided how they should be performed for his audience to see, hear and perceive the new works. He wanted his Catalog to contain new, independent, near perfect, live simulations of the original recordings that would, at the same

An over-the-counter CD containing sound recordings is written to a computer as WAV files. These files are written in 1s and 0s, so that when the digital data is transferred from the CD to a computer, an exact literary representation of the sound can be created.

In support of the application, Mr. Robinson offered the following explanation of how the appelleed for sound recordings were created:

In his September 19, 2008 email, Mr. Robinson asked that the previous sound submitted hard drive serve as the deposit. Mr. Robinson stated that "[e]ach sound recording lists the year in which the work was first published. An example of such a listing for the recording, 'For What It's Worth,' is also attached. In the prior submission, we aggregated the sound recordings by year and submitted instructions to your office on how to access the information on the list included with the physical deposit of the sound recordings." (Email from Robinson to Rimard, dated September 19, 2008).

The Form CO application attached to Mr. Robinsom's September 19, 2008 email sought registration of a work of the performing arts. The application did not include a title but instead referred to "list attached to deposit." The application was signed by Hank Risian on September 17, 2008. The application names Hank Risian, doing business as Media Rights as the author, as well as the claimant, and digital compilation, composition, compilation, music, sound recording/performance, and digital text, computer program, compilation, music, sound recording/performance, and digital simulation of sound recordings. The application does not exclude any material that was previously registered, previously published or not owned by the claimant. It indicates the year of completion as 2003, and the date of publication as January 1, 2003, and that the work was published as a contribution to a larger work entitled "Bluebeat Catalogue." Time MacHine, Killeter Playlists, Be the DJ, (Hank Risian, doing business as Media Rights) T-17, 2008.

#### B. Current Application

In a letter to Mr. Robinson from Ms. Rimard dated September 25, 2008, Ms. Rimard observed that the application refers to the "digital simulation of sound recordings." She stated that it therefore appears that the basis for the claims in these elements is in the digital process used to reformulate the musical sounds. She noted that in general, processes and reformulations are not copyrigitable elements. Furthermore, she stated that regardless of whether this particular process involves copyrigitable authorship, the Office requires authorization from the relevant copyright owners of the

#### C. Refusal of Current Application

Mr. Robinson also included one second's worth of the original recording of "For What It's Worth," by the Buffalo Springfield band printed out in binary format along with one second's worth of Mr. Risman's simulation printed out in binary format for purposes of comparison. Mr. Robinson alleged that by comparing the two binary formats, it becomes apparent that the data sequences are vastly different. Id.

321

It is important to realize that the WAV files of the original recordings are not copied. Nor are the WAV texts of the original recordings merely cleaned up or edited by removing some of the data and leaving the rest intact. What is created is a wholly new and independent writing of data, based on Mr. Risman's artistic expression; and the new resultant simulation sounds are perceived by the brain as the same sounds as the original recording. This simulation, then, is the original work of authorship of Mr. Risman.

Finally, unique sound waves are superimposed over the simulation to dissuade illicit copying. That is, without the requisite authority and consent, the simulation will produce only cacophonous sound when played.

Mr. Risian used psycho-acoustic principles to develop his computer program to create sound recordings simulations. Without getting unduly technical, the simulator's program is based on subjective mathematical modeling that emulates how the human ear and brain perceive music. This psychoacoustic modeling program creates new and different sequences of sounds that are on the original sound recordings, even though the same sounds that are on the original sound recordings, even though the 1s and 0s that cause the human ear and brain to believe it is "hearing" the new works are imitations.

time, be perceived as three different sounds that would never go out of date. Based on his artistic interpretations, a psychoacoustic simulator program was developed by Mr. Risian that would read the WAV files and write completely new and original work, consisting of new bit streams and sequences, creating imitative sounds reflecting Risian's artistic expression.

Id. at 1-2

underlying works in order to consider the claim in the reformed musical sounds. She noted that the claim in "tex" is unclear, but if it refers to lyrics, Mr. Risian must also have authority from the claim in "compilation" of this material, also requires permission from the copyright owner of this material, (Letter from Rimanard to Robinson, dated September 25, 2008).

Ms. Rimanard stated that the only element claimed on the amended application in which registration appears to be possible is the computer program. She referred Mr. Robinson to Circular 61 for information about registration requirements for computer programs, which include submission of the required deposit material. She added that in this case, Mr. Risian would need to complete a new application that names the author and copyright claimant of the "computer program" and does not check any other authorship claims. Finally, Ms. Rimanard stated that if Mr. Robinson wished to pursue registration of copyleft claims, Mr. Risian would need to follow the steps outlined in her letter to Rimanard did not consider registration of MR's claims to copyright on grounds that MR wrote to request that the Office reconsider its refusal. Mr. Robinson observed that Ms. Rimanard did not consider registration of MR's claims to copyright on grounds that MR does not have authority from owners of the original sound recordings "to claim copyright in the **reformatted** musical sounds." (Letter from Rimanard, dated October 2, 2008) (emphasis in original). He noted that the Office rejected purported claims in the lyrics of the original works because of the lack of authority from the original owners to use their recordings in a compilation. Id.

works was rejected on the same lack of permission from owners of the original works to claim copyright in such lyrics. He added that the claim in "compilation" of the original lyrics of the original works because of the lack of authority from the original owners to use their recordings in a compilation. Id.

Mr. Robinson asserted that the nature of the application had not properly addressed. In doing so, Mr. Robinson sought to clarify that Mr. Risian and MR make no application for copyright in "reformatted musical sounds." Referring to Mr. Robinson's email to Ms. Rimanard dated September 19, 2008, he indicated that the claim of copyright is in new, wholly original, independent creations of sound that are perceived by the human ear to be near perfect simulations of the original works. He claimed that the materials claimed in the selected previous recordings that contain nothing that was carried over from the original recordings. He asserted that the original sounds were not edited, compressed or re-formatted by mechanical means into another file type. Instead, he altered, enhanced or altered in any way, but instead that Mr. Risian and MR created new and different sounds in works of original authorship that simulate or imitate the sounds contained in the selected previous recordings. Therefore Mr. Robinson claimed that authority from the original recordings is not required for MR's recordings (a.k.a. simulations) to be copyrighted.

D. First Request for Reconsideration of Refusal of Current Application

In a letter from Mr. Robinson to Ms. Rimanard dated October 2, 2008, Mr. Robinson wrote to request that the Office reconsider its refusal. Mr. Robinson observed that Ms. Rimanard did not consider registration of MR's claims to copyright on grounds that MR does not have authority from owners of the original sound recordings "to claim copyright in the **reformatted** musical sounds." (Letter from Rimanard, dated October 2, 2008) (emphasis in original). He noted that the Office rejected purported claims in the lyrics of the original works because of the lack of authority from the original owners to use their recordings in a compilation. Id.

works was rejected on the same lack of permission from owners of the original works to claim copyright in such lyrics. He added that the claim in "compilation" of the original lyrics of the original works because of the lack of authority from the original owners to use their recordings in a compilation. Id.

Mr. Robinson asserted that the nature of the application had not properly addressed. In doing so, Mr. Robinson sought to clarify that Mr. Risian and MR make no application for copyright in "reformatted musical sounds." Referring to Mr. Risian's email to Ms. Rimanard dated September 19, 2008, he indicated that the claim of copyright is in new, wholly original, independent creations of sound that are perceived by the human ear to be near perfect simulations of the original works. He claimed that the materials claimed in the selected previous recordings that contain nothing that was carried over from the original recordings. He asserted that the original sounds were not edited, compressed or re-formatted by mechanical means into another file type. Instead, he altered, enhanced or altered in any way, but instead that Mr. Risian and MR created new and different sounds in works of original authorship that simulate or imitate the sounds contained in the selected previous recordings. Therefore Mr. Robinson claimed that authority from the original recordings is not required for MR's recordings (a.k.a. simulations) to be copyrighted.

simulations. That is, the simulations of sound recordings without MRT would at this time like to apply for a separate copyright on just the

encryption protection. You have in your possession the deposit in support 800,000) simulations of original sound recordings, all of which have As you know, we have pending an application for copyright on some

apply for a separate copyright registrations. The email stated:  
Robinson requested to use the hard drive deposit that the Office had in its possession to In an email from Mr. Robinson to Ms. Rimard dated December 15, 2008, Mr.

#### E. Request to Apply Deposit to New Application

rights in compilations of original simulations. It's original (or reformatted) sound recordings, the application does seek protection of its recordings. He added that while the application seeks no copyright in compilation of that the application makes no claim for copyright in the lyrics of the original sound applicant. In making this request for reconsideration, Mr. Robinson expressed his intent simulations – not reformatted musical sounds – consisting of works of authorship by the that the Office consider the application to be one seeking protection of original heard by a listener presenting that performance. Mr. Robinson therefore requested simulating his perception of how a live performance of the sound recording would be authentic works of authorship presenting the artistic decision-making of Mr. Risman in Risman's artistic and psycho-acoustic authorship. He asserted that the simulations are actual musical sounds fixed in the original recordings selected and those fixed by Mr. from the recordings of "For What It's Worth" as evidence of the difference between the Mr. Robinson then pointed to the binary printouts of one second's worth of sound

Id. at 2, citing 17 U.S.C. 114(b).

are rearranged, remixed, or otherwise altered in sequence or quality." in which "the actual sounds fixed in the [copyrighted] sound recording[s] in the [copyrighted] recording[s]. Nor did they prepare derivative works recordings by "directly or indirectly recombining" the actual sounds fixed

Risman and MRT did not duplicate the original copyrighted sound

imitate or simulate those in the copyrighted sound recording[s]."  
MRT's original works of newly created sounds, "even though such sounds owners of copyrights on the original sound recordings do not extend to That statutory section expressly acknowledges that the rights of the independent fixation of other sounds," as set forth in 17 U.S.C. 114 (b). Each of MRT's new sound recordings consists "entirely of an

In support of the assertion that no authorization is necessary from the owners of copyrights in the previously existing sound recordings, Mr. Robinson asserted that:

She went on to observe that in order for a work to be regarded as copyrighthable, it must "possess more than a de minimis quantum of creativity." Id., citing *Feist*.

Ms. Gironoux-Rollollew explained that "in no case does copyright protection for an original work of authorship extend to an idea, procedure, process, system, method of operation, concept, principle or discovery, regardless of the form in which it is described, illustrated, or embodied in a work." See 17 U.S.C. 102(b). Therefore, it is not the copyright protection. Instead it is the actual resulting expression that is examined for processes or technique used in creating these "simulations" that can be the subject of copyright protection.

In a letter from Virginia Griroux-Rollow, Attorney Advisor, in the U.S. Office Examining Division to Mr. Robinson dated June 16, 2009, Ms. Griroux-Rollow stated that after considering Mr. Robinson's request for reconsideration, the application and deposit, she was unable to register a copyright claim in his client's sound recordings individually or as a compilation. (Letter from Griroux-Rollow to Robinson, dated June 16, 2009).

G. Response First Request for Reconsideration of Removal of Current Application

In an email from Ms. Rimard to Mr. Robimson dated January 28, 2009, Ms. Rimard stated that she understood MRT's concerns about their pending claim as well as their desire to submit new claims related to the same works. She indicated that the request for reconsideration of the pending claim was under advisement and that a decision would be forthcoming soon. She then asked MRT to wait until the reconsideration was addressed to submit new claims. (Email from Rimard to Robimson, dated January 28, 2009).

E. Response to Request to Apply Deposit to New Application

The reason we would prefer not to submit another deposit containing the first 800,000 simulations without encryption is that should the two depositories become open to the public, it would be very easy for anyone to reverse engineer MRT's encryption logarithms.

The purpose of this message is to seek your approval to use the first deposit (containing encryption) as support for this second application for copyright on simulations only. We previously explained to you how you might gain access to the simulations during your investigation. For the additional 140,000 simulations, they can be accessed through the BlueBeat web page ([BlueBeat.com](http://BlueBeat.com)). If you prefer, we can submit another deposit containing the 140,000 simulations with an access code.

encription. In addition, we would like to apply for an additional 140,000 simulations not contained in the first deposit.

recordings." Id.

that the stimulations are, indeed, musical sounds within the Act's definition of sound and the underlying stimulations are played without the noise, it is immediately apparent Robinson went on to state that "once authority to download and copy has been given, without consent. In other words, these 'noises' constitute a form of encryption." Mr. noises "were superimposed over the stimulations to protect them from being copied the stimulations for which registration is sought." Mr. Robinson asserted that, the tonal Mr. Robinson stated that "the tonal 'noises' described in your reflection are not

Giroux-Rollov, dated June 24 2009).

imitate previously published musical sound recordings. (Letter from Robinson to Robinson wrote to clarify Ms. Giroux-Rollov's observation that the deposit material is nothing more than a series of static disturbances or noises, which do not stimulate or noises for which registration is sought." Mr. Robinson asserted that the tonal Mr. In a letter from Mr. Robinson to Ms. Giroux-Rollov dated June 24, 2009, Mr.

#### H. Request to Clarify Claim

Having found that the materials do not contain sufficient original authorship and do not qualify as a copyrightable compilation, Ms. Giroux-Rollov's refused registration.

"new and original" and has never before been published, by Mr. Robinson's own admission, that these works would not qualify as compilations under the statutory definition. She added that the material appears to consist of all recordings for which Mr. Robinson's client has produced a simulation, and that this indicated that no selection, coordination, or arrangement, as is meant by the statutory definition, is present. Id., citing *Sabava v. Lowry*, 323 F. 3rd 805, 811 (9. Cir. 2003) ("... elements are numerous enough and their selection and arrangement original enough that their combination constitutes an original work of authorship.").

In a letter from Mr. Robinson to Ms. Giroux-Rollov dated June 24, 2009, Mr.

Ms. Giroux-Rollov explained that one of the requirements set forth in the definition of a "compilation" is that the work must be formed by the collection and assembly of pre-existing material. Id. at 2, citing 17 U.S.C. § 101 (definitions). She then pointed out that the submitted material was, by Mr. Robinson's own admission, sounds of a sound recording indicated by the statutory definition. Id. at 2, citing 17 that the static sounds are not a series of musical, spoken, or other sounds constituting the simulation or imitate previously published musical sound recordings as alleged. She added sounds of a sound recording indicated by the statutory definition. Id. at 2, citing 17 U.S.C. § 101 (definitions).

MS. Giroux-Rollov stated that the sound recordings on the hard drive deposit are perceptible as nothing more than a series of static disturbances or noises, which do not interpreted by the courts, means not only that the work is recognizable as the author's, but it also represents at least a minimal amount of creative authorship. Id., citing Alfred Bell & Co., v. *Cataldiada Fine Arts, Inc.*, 191 F. 2d 99 (2d Cir. 1951).

Publications v. Rural Telephone Service, 499 U.S. 340 (1991). She added that, a certain minimum amount of expression must have originated with the author. Originality, as interpreted by the courts, means not only that the work is recognizable as the author's, but it also represents at least a minimal amount of creative authorship. Id., citing Alfred Bell & Co., v. *Cataldiada Fine Arts, Inc.*, 191 F. 2d 99 (2d Cir. 1951).

Ms. Giroux-Rollow went on to state that although Mr. Robinson was informed to the contrary, the Office will not accept individual applications to cover approximately 800,000 individual works which are intended for individual, separate publications or distribution; each separately published work must be separately registered. Ms. Giroux-Rollow added that the Office does not accept the implied assertion that some 800,000 individual sound recordings exist as a compilation, either published or unpublished, and that such a compilation would reflect the statutory required selection, coordination or arrangement of these recordings that any bringing together, or supposed compilation, of client's likely constituents of all recordings for which Mr. Robinson has produced a simulation or arrangement required for a copyrightable compilation is selected or coordinated for such a case. The necessary editorial compilation of these recordings most likely consists of all recordings for which Mr. Robinson's client has produced a simulation or arrangement required for a copyrightable compilation.

#### 1. Response to Request for Change Claim

Mr. Robinson asserted that the deposit material was submitted to the Copyright Office in the current hard drive format "pursuant to agreement," citing to an email from Ms. Riniard dated May 15, 2008. Mr. Robinson then requested "confirmation that if the correct sounds (of the underlying simulations) are considered, such simulations are eligible for registration." *Id.* at 2.

In support of his assertion that the sound recording simulations contained in his client's deposit are the product of original authorship, Mr. Robinson characterized the works as "new impressionistic performances." He stated that the sound recordings certain artistic elements of original compositions or melodies, he asserted that they are operators. While he conceded that they are perceived by the human ear to resemble simulations represent the original production of a series of new sounds, created by human sound recordings simulations are original artistic expressions. He went on to offer that the sound reproductions of existing copyrighted sound recordings. He maintained that the not mere reproductions of existing copyrighted sound recordings.

In the simulations is not based on: "re-mixing," "re-mastering," "editing," "equalization," "reverberation," or "balancing." Id. at 3-4.

It is helpful to understand what the simulations are not. He then stated that the authorship in the simulations is helpful to understand what the simulations are and how they were created, in order to understand that the sound recording simulations are and how they were created, in order to understand that the sound recording simulations are original artistic expressions. He went on to offer that the sound recordings simulations are original artistic expressions. He maintained that the not mere reproductions of existing copyrighted sound recordings.

Mr. Robinson began the substantive portion of his request by asserting that the sound recording simulations contained in his client's deposit are "sound recordings" as defined in 17 U.S.C. § 101. Furthermore, he claimed that each of the simulations resulted in the independent fixation of a series of musical sounds in a tangible medium of expression, principally embodied in phonorecords. He maintained that each of the simulations also contains original authorship and that in order to ensure that each of the simulations would not be illicitly copied, proprietary technology was used during creation. He noted that BlueBeat makes no claim for registration of the actual sounds fixated. He noted that BlueBeat makes no claim for registration of the simulations from unauthorized copying. Id., citing 17 U.S.C. § 101 (definitions).

Robinson asserted that the applicant seeks registration of new expressions of original authorship and "requests registration of that deposit collection of approximately 800,000 simulations identified by the title, 'For What It's Worth.'" Id. at 2-3.

Mr. Robinson indicated that his simulations contained lyrics in the style of "compilation" or "re-mixed" sounds from previously existing sound recordings. Rather, Mr. Robinson asserted that the applicant seeks registration of new expressions of original authorship and "requests registration of that deposit collection of approximately 800,000 simulations identified by the title, 'For What It's Worth.'" Id. at 2-3.

Mr. Robinson indicated that his simulations contained lyrics in the style of "compilation" or "re-mixed" sounds from previously existing sound recordings. Rather, Mr. Robinson asserted that the applicant seeks registration of new expressions of original authorship and "requests registration of that deposit collection of approximately 800,000 simulations identified by the title, 'For What It's Worth.'" Id. at 2-3.

Mr. Robinson indicated that his simulations contained lyrics in the style of "compilation" or "re-mixed" sounds from previously existing sound recordings. Rather, Mr. Robinson asserted that the applicant seeks registration of new expressions of original authorship and "requests registration of that deposit collection of approximately 800,000 simulations identified by the title, 'For What It's Worth.'" Id. at 2-3.

Mr. Robinson indicated that his simulations contained lyrics in the style of "compilation" or "re-mixed" sounds from previously existing sound recordings. Rather, Mr. Robinson asserted that the applicant seeks registration of new expressions of original authorship and "requests registration of that deposit collection of approximately 800,000 simulations identified by the title, 'For What It's Worth.'" Id. at 2-3.

## 2. Second Request for Reconsideration of Refusal of Current Application

Mr. Robinson then provided a recitation of what he referred to as a review of fundamental psychoacoustic principles. He offered that musical tones produced by musical instruments or the voice consist of a sequence of time-dependent, pressurized spherical waves that originate from a source point and propagate through the air to the human ear. Mr. Robinson explained that when received by the ear, sound waves are converted into electrical action potentials for the brain to process, and that as a result the brain's processing, the sounds of a recording are perceived to have certain artistic characteristics. He stated that five of the most important artistic characteristics – or parameters – in music are pitch, loudness, duration, timbre and space. Id. at 4-5.

Mr. Robinson went on to offer that in creating the subject sound recording simulations his client partitioned the original sounds into segments for observation. These segments were then analyzed by an artistic operator who, employing psychoacoustics and advanced harmonic analysis, synthesized an independent model of the sounds. He stated that a firewall was utilized to ensure independence between the sounds of the model and those of the original recording. Id. at 5.

Mr. Robimson went on to argue that in creating the subject sound recording simulations his client partitioned the original sounds into segments for observation. These segments were then analyzed by an artistic operator who, employing principles of psychoacoustics and advanced harmonic analysis, synthesized an independent parametric model of the sounds. He stated that a firewall was utilized to ensure independence between the sounds of the model and those of the original recording. *Id.* at 5.

Mr. Robinson then provided a recitation of what he referred to as a review of fundamental psychoacoustic principles. He offered that musical tones produced by musical instruments or the voice consist of a sequence of time-dependent, pressurized spherical waves that originate from a source point and propagate through the air to the human ear. Mr. Robinson explained that when received by the ear, sound waves are converted into electrical action potentials for the brain to process, and that as a result of the brain's processing, the sounds of a recording are perceived to have certain artistic characteristics. He stated that five of the most important artistic characteristics – or parameters – in music are pitch, loudness, duration, timbre and space. Id. at 4-5.

### III. DECISION

He asserted that the administrative review record reveals the original examiner's inquiries concerning, and ensuing acceptance of, his client's preferred interpretation of the statute. The program works fixed into a catalog collection of music. Id., citing (Emails between Mr. Robinson and Ms. Rindard dated April 16 through May 15, 2008). Mr. Robimson also cited to "Circular 50, FL-105, revised May 2009 and section 202.25 of Title 37, U.S. Code." Id.

Mr. Robimson claimed that due process not only guarantees substantive and procedural fairness in the uniform application of registration regulations and the Copyright Office's published policies and procedures, but also justifies reliance by the applicant upon the Examiner's acceptance of a single fee for the registration of the entire deposit. Finally, he asserted due process compels that the subject applications be reviewed impartially on their merits without further undue delay. Id. at 6-7.

Mr. Robinson then turned to address the Office's repeated concerns regarding the appropriateness of the application. Mr. Robinson expressed strong exception to the rejection which stated that, "although you were informed to the contrary, we cannot probably intend for individual, separate publications or distribution...." Id., citing (Letter from Grisoux-Krollow to Robinson, dated July 13, 2009).

Mr. Robinson explained that the test of originality has a low threshold, which only requires "that the author" contributed something more than a "merely trivial variation, something recognizably 'his own,'" and that "no large measure of novelty need be claimed." *Id.*, citing *Afford Bell* supra, at 103. He then asserted that "[any] listener to Bluebeats' internet webcastings can appreciate the qualitative uniqueness and distinction of the catalog." For what it's worth, created by Bluebeats. This panel need only conduct its own physical demonstration to confirm this fact." *Id.* In sum, he stated that his client has established that the sound recordings simulations possess the "perceived element" prerequisite to copyright protection," that is, that the simulations are "the original product of Bluebeats, no one else." *Id.*, citing Niimerg on Copyright § 2.01.

It is thus apparent that MRT had not obtained the necessary licenses to make and distribute phonorecords of nondramatic musical works, and that MRT wishes to obtain compulsory licenses pursuant to 17 U.S.C. § 115. The Board observes that the current

(Letter from Risian to Copyright Office, dated October 22, 2007).

Therefore, we wish to obtain a Compulsory License under Section 115 asked for one million dollars up front and 50% of our gross revenues. Each of the four major labels: Sony, Warner Bros., Universal, and EMI, carry for MRT so prohibitive that we cannot afford to pay their price. And the MOL.org have diligently attempted to negotiate individually with the major labels. However, the labels have created a financial barrier of Media Rights Technologies and its affiliates, Blubebat.com, Basebeat.com

dated October 22, 2007, stated:

However, the Office does require such proof of authority in unusual cases such as this authorization or permission to use the original underlying material in a derivative work. One where statements by the applicant and the overall context make it doubtful that such authority has been obtained. In this case, Mr. Risian, in a letter to the Copyright Office dated October 22, 2007, stated:

As stated in Ms. Rima'd's December 17, 2007 letter to Mr. Risian, it is not the Office's general practice to require applicants to provide written indication of

copyrightual licenses from the copyright owners of the underlying musical compositions ("Platinum's sound recordings are derivative works, and its copyrights in the sound recordings are invalid and unenforceable because it has failed to obtain compulsory or consensual licenses from the copyright owners of the underlying musical compositions")

([Platinum], v. EastSideMusic, Inc., 398 F.3d 1193, 1200 (10th Cir. Okla. 2005))

that where a work is based on a preexisting work, without authorization of the copyright owner and unlawfully, the new material may be subject to copyright protection only to the extent that it can be separated from the preexisting work."). Also See, *Parallelum* Music, Inc. v. EastSideMusic, Inc., 398 F.3d 1193, 1200 (10th Cir. Okla. 2005)

copyright subsists does not extend to any part of the work in which such material has been used unlawfully. See 17 U.S.C. § 103(a), *Compendium II* § 204.04 ("This means that whether or not the sound recording, 'simulations' are in fact

Copyright protection for a work employing preexisting material in which

copyright rights in those approximately 800,000 musical works are owned and administered by a large number of persons and entities.

original works of authorship, the Board notes that the sound recordings in question are recordings of musical works which MRT has not obtained permission to record. The recordings of musical works in the Board's notes that the sound recordings in question are employed preexisting works in a permissive manner, without authorization of the copyright owner, and therefore constitute unauthorized derivative works that are not eligible for copyright protection, and that the Office does not have a sufficient deposit for purposes of registration.

#### A. Unlawful use of preexisting material in the applied for Sound Recordings

sound recording simulations that are the subjects of the application for registration employ preexisting works in a permissive manner, without authorization of the copyright owner, and therefore constitute unauthorized derivative works that are not eligible for copyright protection, and that the Office does not have a sufficient deposit for purposes of registration.

12, 2008, indicate that a contemporaneous connection to MRT servers and transmission of additional instructions to "access the 831.812 derivative sound recordings," received by the Office on or about August 2, 2008, appears to be decrypted." (Email from Robinson to Rinaldi dated May 15, 2008). Furthermore, MRT's states, "a special authorization code will be provided via an online account that will permit the sound recordings to be decrypted." (Email from Robinson to Rinaldi dated May 15, 2008).

---

Based on the extensive, and often confused, record of the various applications by Hank Risian, Media Rights Technologies, and BlueBeat.com to register approximately 800,000 sound recordings as well as the actual hard drive deposit and access instructions received by the Office on or about August 12, 2008, it appears as if the material on the hard drive deposit either 1) contains less than the complete sound recordings, requiring additional sound transmission of additional sound recording data from MRT servers in order for the hard drive to comprise complete renderable sound recordings, or 2) contains complete sound recordings which are encrypted, requiring contemporaneous transmission of additional encryption key data from MRT servers in order for the sound recordings to be renderable.<sup>2</sup>

## B. Inadequate Deposit

However, because we recognize that you may not have had an opportunity to address this issue, the Board will hold its decision in abeyance for 30 days in order to give you an opportunity, if you elect to do so, to assert and explain any factual or legal errors in the Boards' conclusion on this point. If, for example, MRT did obtain mechanical licenses for each of the musical works that were recorded, you should provide evidence of such licenses.

We recognize that this ground was not relied upon by Ms. Grionoux-Rollow. However, the Board's review of a determination to refuse registration is de novo, and the Board may rely upon a ground not raised below. The Board is not bound by erroneous conclusions made by the registration specialist, nor must the Board overlook grounds for refusing to register simply because the registration specialist overrode your application to refuse registration because the Board is not bound by copyright protection, since a preexisting musical work pervades the entirety of each sound recording. See M. Niimer, Niimer on Copyright § 3.06 (2010).

In light of previous statements to the Office by Mr. Risian and the context of the application, the Board must conclude that MRT has not acquired either compulsory or consensual licenses from the copyright owners of the underlying musical compositions. Therefore, the sound recordings in which MRT is claiming copyright are not subject to copyright protection, since a preexisting musical work pervades the entirety of each sound recording. See M. Niimer, Niimer on Copyright § 3.06 (2010).

Appropriately 800,000 musical works. Id. The Board also observes that 17 U.S.C. § 115 requires that MRT desire to obtain the necessary section 115 compulsory licenses for any phonorecords of the work.<sup>3</sup> 17 U.S.C. § 115. The Board also observes that 17 U.S.C. § 115 requires that any person who wishes to obtain the compulsory license must serve notice of intention to do so "before or within thirty days after making, and before distributing any phonorecords of the work."<sup>4</sup> 17 U.S.C. § 115.

Richards, Syacisms Administrator, MRT to Copyright Office, received on or about August 12, 2008).

sound recording would defeat some of the fundamental purposes of a copyright deposit. Furthermore, provision of an access code via an online connection to outside servers in order to enable a registration specialist to listen to the sound recording during examination of the claim without permitting subsequent independent perception of the recording to be acceptable, the sound recording must be perceptible from the deposit. The Board also notes that in order for a deposit of a phonorecord of a sound

prevents the deposit from being "complete" for the purposes of registration. Intended result of the missing authorization code. The absence of such an element phonorecords contained on the deposit. Indeed, garbling the contents of the deposit is the element. Furthermore, the absence of the authorization code garbles the contents of the (Compendium II § 805.02(a)(2)). In this case, the authorization code is a missing

- 1) All the parts of the work for which registration is sought are present;
- 2) The removal of the missing elements did not physically damage the copy or phonorecord or garble its contents; and
- 3) The work is exempt from mandatory deposit under section 407 of the copyright law (see 17 U.S.C. 407, and 37 C.F.R. 202.19(e)) or the copy deposited consists entirely of a container, wrapper, or holder which is exempt from the identifying material requirements because it can be stored and

Where certain physically separable elements are missing from the deposit, a copy or phonorecord will still be accepted as a complete copy, if:

The Board also observes that Compendium II § 805.02(a)(2), addressing the meaning of "complete" deposit for published works, sets forth that:

publication of the best edition of the work as required in 37 C.F.R. § 202.19(b)(2). This means that the hard drive constitutes less than all of the elements comprising the unit of encryption key to enable complete sound recordings on the hard drive to be rendered in order to enable the hard drive to complete comparable sound recordings, or an deposit submitted with the Office is not "complete" within the meaning of the Office's 202.19(b)(2) (emphasis added). Also See 37 C.F.R. § 202.20(b)(2)(v). The hard drive mandatorily depositable subparagraph (c) of this section, " 37 C.F.R. § separately, would not be copyrightable subject matter or would otherwise be exempt from publication of the best edition of the work, including elements that, if considered in either case of sound recordings, a "complete copy includes all elements comprising the unit of recording deposit of copies and phonorecords for copyright registration dictate that in the when a deposit is "complete" pursuant to 17 U.S.C. § 408. The Office's regulations in either case, the deposit falls outside of the Office's regulations addressing

A single unit of publication is characterized by the following features that show an intent to create a single, integrated unit

The Office's regulations regarding registration as a single work state that "[i]n the case of published works; all copyrightable elements that are otherwise recognizable as self-contained works, that are included in a single unit of publication, and in which the copyright claimant is the same" shall be considered a single work. 37 C.F.R. § 202.3(b)(4)(A). While the phrase "unit of publication" is not defined in the regulations, the written practices of the Office's Performing Arts Division regarding unit registrations for online works states that:

#### A. Unit of Publication

There are additional appendices in the application. Although the Board does not base its refusal to register the works on the following deficiencies at this point in time, these deficiencies would have to be addressed in the event that satisfactory responses were received pertaining to the two grounds for refusal set forth above.

#### III. ADDITIONAL OBSERVATIONS

If the Board's understanding of the nature of the deposit is in error and if the works may be perceived without a connection to an external network, you may advise us of those facts and of the means by which access to the works may be gained, on a permanent basis, to the works on the hard drive within the next 30 days.

The Board recognizes your citation to an email from Ms. Rimard dated May 15, 2008 in which Ms. Rimard stated that "We will accept the hard drives as described below and as noted above, the Board reviews requests for reconsideration on a *de novo* basis and is not bound by any perceived acceptance by the registrant specialist of an inadequate deposit. As set forth above, the Board has found that the submitted hard drive fails short of fulfilling the legal requirements for a "complete" deposit and does not fulfill several of the fundamental purposes of a copyright deposit. Therefore, it cannot be accepted for purposes of registration.

A deposit that cannot be received as a self-contained whole would be useless for purposes of being included in the Library of Congress collection, which has no use for "copies" of works from which the works cannot be received. And, such a deposit would not serve the purpose of documenting the authorship that is being registered.

- (U.F.R. § 202.25) is not a valid citation.
- publication for online works. The Board also notes that „section 202.25 of Title 37, U.S. Code“ (or 37) not contradict or call into question the Office’s Performing Arts Division Online Practices regarding unit of units of publication” of musical compositions. However, the language in these Office publications does & P Division, dated August 21, 2009, address the possibility of registering “published collections” and “The Board observes that „Circular 50“ and „PL-105“, which are cited in Mr. Robimson’s to Copyright K track.)
- (First off, the company has started selling MP3 music downloads for the low price of 25 cents a <http://www.mcaworld.com/article/143602/2009/10/bluebeard.html> BlueBeat sells Beatles MP3s, permission be denied” low price of 25 cents per MP3”)
- (BlueBeat.com is selling the entire Beatles catalog, including recently-released remastered albums, for the “Beatles Finally for Sale Online ... on BlueBeat” <http://www.wired.com/gadgeteer/2009/10/beatles-drive-deposit>
- “The individual titles for each of the approximately 800,000 sound recording files are apparent on the hard drive deposit

Moreover, registration of a unit of publication only covers those works that were first published as part of the same unit. R.F.M.A.S., Inc., So. 619 F. Supp. 2d 39, 40-42 (S.D.N.Y. 2009); McLaren v. Chico’s FAS, Inc., 2010 U.S. Dist. Lexis 120185, \*5-\*11 (S.D.N.Y. Nov. 9, 2010). Thus, the Board would not be willing to approve a registration of all of the approximately 800,000 works in a single registration unless it were satisfied that they were all first published as part of the same unit at the same time. The record of all of the approximate 800,000 works in a single registration reflects that the registrant (S.D.N.Y. Nov. 9, 2010).

However, registration of a unit of publication only covers the sounds recordings under a single application.<sup>3</sup> Sound recordings to the public as single sound recordings,<sup>4</sup> Furthermore, there is no intention to be marketed and sold to the public as a single integrated unit. As such, the application for material falls outside of Office’s Performing Arts Division Online Practices intended to be marketed and sold to the public as a single integrated unit. The Board has taken administrative notice of the fact that the applicant marketed and sold the relevant individual titles.<sup>5</sup> Similarly, it does not appear that the deposit material is packaged and recorded as a single integrated unit, particularly since the component works do have applied for material has no title but instead refers to “list attached to deposit.” Therefore, the did not include a title but instead referred to “list attached to deposit.” Therefore, the Form CO application attached to Mr. Robimson’s September 19, 2008 email

- (U.S. Copyright Office, Performing Arts Division Online Practices, Chapter 19, Publication/Creation, Part C, Unit of Publication requirements for online works).
- 3) It is intended to be marketed or sold to the public, and not simply to intermediaries such as distributors or online music services, as a single, physical format (e.g., bound volume, CD).
- 2) It is packaged as a single, integrated unit, especially as embodied in a physical format (e.g., bound volume, CD).
- 1) It has a title identifying it as a single, integrated unit, particularly if component works have individual titles.
- purchased or selected individually as well.
- integrated unit, even though component works in the unit may be to intermediaries such as distributors or online music services, as a single,
- 3) It is intended to be marketed or sold to the public, and not simply in a physical format (e.g., bound volume, CD).
- 2) It is packaged as a single, integrated unit, especially as embodied in a physical format (e.g., bound volume, CD).
- 1) It has a title identifying it as a single, integrated unit, particularly if component works have individual titles.

United States Copyright Office  
for the Review Board  
Deputy General Counsel  
Tanya Sanders  
*Tanya Sanders*  
Sincerely,

For the reasons stated above, the Copyright Office Board of Appeals concludes that the appeal for approximately 800,000 sound recordings simulacra cannot be registered for copyright protection. This decision shall constitute final agency action from the date of this letter unless, prior to that time, the Board receives a request days from the date of this letter unless, prior to that time, the Board receives a request to reconsider the conclusions set forth above in Parts II.A. and B., along with a explanation of all factual and legal grounds for the request.

## CONCLUSION

The Board has serious reservations relating to whether what you describe as "simulations" of the original sound recordings derivative works. While the Board has difficulty understanding your explanation of how the sound recordings "simulations" were created, we find the recent description by the United States District Court for the Central District of California of similar arguments offered by Bluebeat as "obscure and undeveloped" clearer, more comprehensible explanation of the means by which these "simulations" were created. More specifically, the Court found that the sound recordings derivative works were alleged to have been published as a unit on January 1, 2003 (Media al v. Bluebeat, Inc. et al., No. CV 09-8030-JST (JCx), slip op. at 9 (C.D.Ca December 8, 2010)). If the Board were to reach the merits of this question, it would require a much pseudo-scientific language" to coincide with our initial reaction. Capitol Records, LLC et al., slip op. at 9 (C.D.Ca December 8, 2010). In the Bluebeat case, the Court found that the sound recordings derivative works were alleged to have been published as a unit on January 1, 2003 (Media al v. Bluebeat, Inc. et al., No. CV 09-8030-JST (JCx), slip op. at 9 (C.D.Ca December 8, 2010)). If the Board were to reach the merits of this question, it would require a much clearer, more comprehensible explanation of the means by which these "simulations" were created.

## B. "Simulations" as Original Sound Recordings

Below are indications that several of the sound recordings at issue were first published as part of different units at different points in time. For example: 792,852 of the sound recordings were alleged to have been published as a unit on August 15, 2002 (Media Rights Technologies application dated September 14, 2007); 796,138 of the sound recordings were alleged to have been published as a unit on August 11, 2001 (Media Rights Technologies application dated August 15, 2007); 796,138 of the sound recordings were alleged to have been published as a unit on January 1, 2003 (Media Rights Technologies application for "BlueBeat.com Derivative Works," dated October 22, 2007).
