National Governors' Association

February 16, 1984

Clarence J. Brown  
Deputy Secretary  
U.S. Department of Commerce  
Room 5838, Herbert Hoover Building  
14th Street and Constitution Avenue, N.W.  
Washington, DC 20230

→ M.L.  
James R. Th  
Governor of  
Chairman

Raymond C.  
Executive Di

Dear Mr. Brown:

The members of the Task Force on Technological Innovation would like to express their appreciation for your participation in the upcoming February 26 work session. I have enclosed a copy of the final agenda for that session and I am sure you will agree that you will be joining a most distinguished panel of guests. Governor Jim Hunt would like to invite you to join him, Task Force Governors, and other program participants at 9:00 a.m. in an informal gathering before the meeting for coffee and pastry in Columbia C, adjacent to the meeting room.

This agenda represents the broad range of perspectives and actors involved in the area of technology policies for economic development, and exemplifies the intergovernmental and intersectoral approach to coordinating state and federal technology policies emphasized by the Task Force membership. Also enclosed is a copy of the discussion paper, "Technological Innovation: State Initiatives and Federal Policy" which is intended to serve as the initial basis not only for the February 26 work session, but also for any continuing cooperative effort that might emerge from this meeting.

Members of the Task Force place a premium on maximizing the opportunity for informal discussions between themselves and panelists at their work sessions. For this reason, participants have not been asked to prepare individual presentations, but rather to be prepared to address a number of issues related to technological innovation as their particular expertise or position warrants. While we therefore anticipate a relatively informal and wide-ranging discussion focused around the central topic of joint state-federal technological innovation strategies, it would be helpful at this point to delineate several key issues of interest to Task Force members. This should serve, in addition to the discussion paper itself, to focus your preparations for this meeting. Six such possible discussion points involving intergovernmental cooperative issues have been attached. However, these by no means encompass the full range of possibilities. The Governors expect that you will feel free to interject points during the meeting you consider relevant and representative of your perspective.

A general state-level perspective has been outlined in the accompanying discussion paper. Other issues of concern to the Task Force members will emerge during the session as the Governors draw from their individual state and regional experiences. If you need any information regarding the Task Force or specifics on the meeting itself, please feel free to contact either me (624-7814) or staff assistant Brent Lane (624-7874).

Sincerely,

Charilyn W. Cowan  
Staff Director  
Committee on Transportation,  
Commerce and Communications

## SELECTED TOPICS

Recent experiences of governors and states in pursuing individual technology development economic strategies have distinguished several potential areas for enhancing state and federal cooperative efforts. These six areas could be explored at the Task Force technology work session. A number of additional issues are expected to emerge from the meeting, but the following may establish some initial parameters for interaction:

1. State and local governments have been active in support of technological innovation through a great variety of mechanisms, yet the success of most such efforts depends directly or indirectly on economic factors transcending state and local jurisdictions. The federal government should play the primary role in establishing a national economic environment conducive to technological innovation activities. While a number of actions in regard to tax and monetary policies have been implemented, additional actions, such as extending the R&D tax credit, antitrust protection for joint R&D activities, and expanding venture capital availability to small businesses, may be necessary.
2. Given existing and future federal and state budgetary constraints, joint initiatives might most appropriately address mechanisms to optimize the utilization of existing scientific and technological research resources in support of economic development. An effort should be made to more effectively translate the results of federal R&D expenditures, in both defense and non-defense related areas, into civilian economy applications. Given the emerging role of state and local governments as technological facilitators in public/private sector relations, existing programs such as the Stevenson-Wydler federal laboratories provisions and the Small Business Innovation Research program might be amended to enhance their utility as components of state and local technology development strategies.
3. The Department of Commerce, the Small Business Administration, the Department of Housing and Urban Development, the National Science Foundation, and other federal agencies cumulatively administer a broad spectrum of programs which have supported traditional development activities according to each agencies' particular mission orientations. Though implemented at the state and local level, the mission-oriented rigidity of many such programs often denies the flexibility necessary to address state and local development priorities. The Community Block Grant Program was recently amended to permit increased flexibility in applying those funds to economic development activity. Other existing assistance programs should also be examined to identify means by which state and local governments might innovatively direct those programs to technology development efforts.

4. American "high technology" manufacturing industries possess a significant comparative advantage in international trading. Indeed, in a period of record trade deficits, the U.S. continues to run a substantial surplus in terms of advanced technology products. States are increasing their activity in support of international trade by encouraging local firms' participation through a variety of incentive programs. However, small businesses in general, and new technology-based ventures in particular, encounter a number of obstacles which often preclude their participation in the growing world economy. How might the federal government cooperate with state and local governments to encourage greater small business international trading activity, especially among those technologically innovative small enterprises which constitute important elements of most state technology development strategies?
5. Accelerating the commercialization process for innovative technologies has often required closer working relationships between research universities and local industry. Recognizing this correspondence, many states have attempted to institutionalize academic-industrial linkages and partnerships through a variety of mechanisms such as innovation centers, incubator facilities and direct research support. As the principal supporter of academic basic research at state universities, the federal government shares a mutual interest with states in promoting the utilization of these research efforts.
6. A perennial criticism of the R&D enterprise in the U.S. is that there is no apparent overall strategy. Such criticism has given rise to proposals to create a National Technology Foundation, or by other means to create a more cohesive way of formulating and carrying out goals and objectives with respect to scientific, engineering and technological pursuits. Running counter to these proposals is the contention that the Science Advisor to the President, the Office of Science and Technology Policy and the National Science Foundation, working with other federal agencies, Congress, state governments and private sector, comprise a suitable structure for effective strategic planning. If such a structure exists, how might it acknowledge and incorporate the growing leadership of states as actors in the technology policy arena? If such a strategy is to be considered, how might state-level leadership in developing the economic growth potential of technological innovation be enhanced?

TASK FORCE ON TECHNOLOGICAL INNOVATION

WORK SESSION  
Sunday, February 26, 1984  
9:30 - 11:00 a.m.
