

Table A.21 *Business Dissolution Rates by Firm Size and Number of Jobs Created (Percent)*

Age of Business (Minimum Years)	All Firms	Firms Creating No Jobs	Firms Creating 1-4 Jobs	Firms Creating 5+ Jobs
2	23.7	29.9	8.3	6.0
4	52.7	64.8	19.6	13.1
6	62.2	74.0	23.5	21.1
8	70.9	81.5	46.5	30.0
10*	79.0	90.5	59.1	37.6

*Estimated using log linear regression models.

Note: Firms were traced beginning in 1976 and observed, if available, every other year beginning in 1978 and ending in 1990. Business dissolution includes businesses that disappear for any reason at all, including failure, bankruptcy, owner retirement, owner health, or the desire to enter a more profitable endeavor. It has been estimated that about 15 percent of business dissolutions represent actual failures.

cable opportunity to participate in the performance of contracts let by the federal government. To that end, Public Law 95-507 requires the head of each federal agency, after consultation with the U.S. Small Business Administration (SBA), to establish realistic goals for the award of contracts to small and small disadvantaged businesses.

It is important to note that goals differ with each agency. This is in part because of the procurement mix of each procuring agency. Each agency has a specific mission that requires a vast diversification of products and services. For example, the Department of Defense requires the purchase of a large number of aircraft, but there are few small businesses providing this service; the General Services Administration, however, purchases paper clips, paper, computers, etc., for which there are many small business vendors. Therefore, different percentage goals would be established for these agencies.

In establishing their goals, agencies use their professional judgment to consider historical performance, anticipated budget or mission changes affecting the procurement mix, and forecasted major acquisitions that will cause deviation from usual award practices. If these goals are not recommended at levels consistent with the U.S. Small Business Administration's analysis, the SBA does not concur and negotiates a goal at a more appropriate level.

SBA Guidance

Each year, federal agencies provide the SBA with estimates of the total dollar amount of (1) all prime contracts to be awarded during the year and (2) subcontracts to be awarded by all of the agency's "reporting prime contractors."¹ After consulting with the SBA, each agency must also report its goals, expressed both in dollars and as a percentage of the total amount to be awarded. If there is a variance between the dollar and percent amounts, the percentage controls. The categories are:

- Prime contract awards to be made to small businesses;
- Prime contract awards to be made under the authority of Section 8(a) of the Small Business Act;
- Prime contract awards to be made to small businesses owned and controlled by socially and economically disadvantaged individuals other than 8(a);
- Prime contract awards to be made to small businesses owned and controlled by women;
- Subcontracts to be awarded by prime contractors to small businesses;
- Subcontracts to be awarded by prime contractors to small businesses owned and controlled by socially and economically disadvantaged individuals; and
- Subcontracts to be awarded by prime contractors to small businesses owned and controlled by women.

¹ "Reporting prime contractors" is defined in the federal government's Standard Form 295. See the appendix for detailed instructions provided to agencies.

Chart 2 *Share of Federal Subcontract Dollars Awarded by Size of Firm, FY, 1992*

Source: U.S. Small Business Administration, Office of Procurement Assistance.

Most of the agencies provided the information; however, the Department of Defense was unable to collect these data. The Federal Procurement Data System's Federal Procurement Report for FY 1992 shows that 67.7 percent of the total dollars awarded was by the Department of Defense. The SBA has retained the other agencies' reports; when complete data are collected, the requested information will be provided. The absence of these data should not prevent the SBA from reporting the procurement preference goaling achievement report.

The SBA's detailed analysis and comments cover only the 18 federal agencies with the largest contracting budgets. These 18 agencies represent approximately 99 percent of federal procurement awards reported to the SBA. Tabular data on many of the smaller agencies are also included for FY 1992.

Small Business Prime Contract Awards

In FY 1992, the federal government awarded 22.9 percent, or \$41.3 billion of a total \$180.4 billion, in prime contract dollars to small business (Table 1).

Both the total amount and the percentage awarded to small businesses exceeded the projected figures: small firms gained \$4.9 billion more than had been estimated, and 1.8 percentage points more than the overall share goal of 21.1 percent.

Of the 18 agencies with the largest contracting budgets, 10 exceeded their percentage goals for FY 1992—eight by more than \$100 million. The Department of Defense (DOD) awarded \$24.0 billion—more than half—of the total \$41.3 billion in contracts to small business. The DOD exceeded its 19.0-percent goal by 1.5 percentage points; the additional amount awarded to small business exceeded \$2.2 billion.

The magnitude of the dollar gains is not always apparent in the small business share figures: DOD exceeded its 19.0-percent goal by 1.5 percentage points, but because the total contracted amount was more than \$2.7 billion above the estimated figure, the additional amount to small firms was \$2.2 billion, for a small firm award total of \$24 billion. On the other hand, although the Department of Agriculture missed its goal by 7.7 percentage points, small business received an additional \$242 million for total prime contract awards to small businesses of \$1.6 billion.

Seven of the 18 agencies set more aggressive goals in FY 1992 than in FY 1991 and three of those—the Department of Health and Human Services, the Department of Transportation, and the Department of Veterans Affairs—achieved their goals.

Agency Shortfalls

The U.S. Small Business Administration is charged in P.L. 95-507 to analyze and comment on shortfalls by major reporting agencies. Nine of the 18 major agencies missed their percentage goals for prime contract awards to small businesses: the Departments of Agriculture, Education, Energy, Interior, Labor, and State; the Environmental Protection Agency; the General Services Administration Federal Supply Schedules; and the Tennessee Valley Authority. This group includes three of the agencies that had set more aggressive goals than in FY 1991.

Department of Agriculture

The Department of Agriculture (USDA) failed to achieve its FY 1992 goal of 55 percent by 7.7 percentage points. In FY 1992, USDA underestimated their projected \$2.46 billion expenditures by more than \$913 million. This increased the dollar awards to small business by \$242 million, although the percentage share was under the goal of 55 percent. SBA records contain no extenuating circumstances relating to USDA's performance.

Department of Education

The Department of Education (DOEd) failed to achieve its 23.9-percent goal by 6.4 percentage points. The DOEd underestimated its projected \$169 million expenditures by more than \$115 million.

¹ Represents sum of three-digit components, which are also shown separately.

² Represents two-digit industries with three-digit industry breakout. However, due to the inability to distribute all industry employment, industry components do not equal the specified two-digit total. If the industry was clearly large-business-dominated or small-business-dominated, the two-digit industry was listed to represent the overall two-digit industry total.

³ Each two-digit subcomponent industry reflects both the sum of the separately enumerated three-digit components and a residual component representing industries not covered by the Bureau of Labor Statistics.

n.e.c. = Not elsewhere classified.

Note: Excludes self-employed workers. Small-business-dominated industries are industries in which a minimum of 60 percent of employment is in firms with fewer than 500 employees. While 99.9 percent of industry employment was allocated to small, large, or indeterminate industries, about 2 percent of employment in the manufacturing and service sectors could not be allocated because of SIC code inconsistencies.

¹ A total of 62 agencies are represented in the total dollars for FY 1992; the 29 organizations listed are those agencies that awarded at least \$15 million in contract actions over \$25,000 in FY 1992. In the aggregate, these organizations accounted for more than 99 percent of the dollar volume of awards over \$25,000 in FY 1992.

² The negative small business figures for the Tennessee Valley Authority in FY 1985 were due to deobligations in multiyear contracts for the purchase of coal that had fallen in price.

NA = Not available.

Note: Starting in FY 1983, the dollar threshold for reporting detailed information on DOD procurement actions increased from \$10,000 to \$25,000. For civilian agencies, a similar change was made starting in FY 1986.

¹ Represents sum of three-digit components, which are also shown separately.

² Represents two-digit industries with three-digit industry breakout. However, due to the inability to distribute all industry employment, industry components do not equal the specified two-digit total. If the industry was clearly large-business-dominated or small-business-dominated, the two-digit industry was listed to represent the overall two-digit industry total.

³ Each two-digit subcomponent industry reflects both the sum of the separately enumerated three-digit components and a residual component representing industries not covered by the Bureau of Labor Statistics.

Note: Excludes self-employed workers. Large-business-dominated industries are industries in which a minimum of 60 percent of employment is in firms with more than 500 employees. While 89.9 percent of industry employment was allocated to small, large, or indeterminate industries, about 2 percent of employment in the manufacturing and service sectors could not be allocated because of SIC code inconsistencies.

Chart C.5 Federal Contract Actions to Small, Minority-Owned, and Women-Owned Businesses, FY 1992

Source: Federal Procurement Data System, *The FPDS Federal Procurement Report*, February 11 1993.

Legislative debates in 1994 resulted in the passage of the Federal Acquisition Streamlining Act (FASA). The most significant reform measures included in the law were as follows:

- The small purchase threshold is increased from \$25,000 to \$100,000.
- Federal agencies are encouraged to purchase commercial items and exemptions are provided from certain socioeconomic statutes.
- A governmentwide electronic data interchange (EDI) system will be established to notify potential contractors of procurement opportunities.
- Waivers of certain laws are authorized for certain agency procurements.
- The instances in which agency managers are required to buy from GSA's Multiple Award Schedule are reduced.
- A new 5-percent governmentwide procurement goal is established for women-owned businesses.

The small business share increased in about half of the states between FY 1991 and FY 1992 and declined in the other half. The largest share gain for small firms was in West Virginia, where the small business share more than doubled, from 18.0 to 41.4 percent; the largest loss was in Georgia, where the small business share declined from 23.3 to 11.2 percent.

Subcontracting by Major Purchasing Agency

Data on subcontracts to small businesses are available only from federal agencies that project agency procurement of \$10 million or more and only for individual prime contracts exceeding \$500,000 (except for construction awards, for which the data include only awards in excess of \$1 million). Subcontracting dollars represent a very substantial source of revenue to small firms, especially those specialized firms equipped to perform only part of a large or complex project. The inclusion of subcontracts to small firms raises the small business share of procurement from just under 20 percent of the total value of federal contract actions to over 30 percent in FY 1992.

Although the dollar value of subcontracts varies considerably from year to year, the trend has been generally upward in recent years for most of the major federal procurement centers. Of the 23 major federal agencies and departments reporting for both FY 1992 and FY 1991, 15 show an increase in dollars subcontracted to small businesses over FY 1991 levels (Table C.10).

Paralleling federal prime contracting patterns, subcontracting awards to small firms emanate primarily from the prime contractors to the DOD (\$18.2 billion), the National Aeronautics and Space Administration (\$1.6 billion), and the General Services Administration (\$873.6 million) (Table C.10).

In FY 1992, small businesses also obtained significant subcontract awards working with prime contractors to the Departments of Veterans Affairs (\$610.4 million), Energy (\$233.7 million), and the Treasury (\$155.1 million), the Environmental Protection Agency (\$143.4 million), and the Department of Health and Human Resources (\$108.1 million).

Federal Contract Awards to Minority- and Women-Owned Businesses

Women- and minority-owned businesses are the most rapidly growing segments of federal contracting markets. From FY 1991 to FY 1992, women- and minority-owned businesses increased their share of the value of awards over \$25,000 by 12.9 percent and 20.2 percent, respectively, in the face of declining dollar amounts to small businesses overall and decreasing procurement programs of the federal government (Table C.11). Seventy-seven percent of the FY 1992 dollar awards to women-owned firms and 94 percent of the awards to minority-owned firms were in contract actions over \$25,000 (Table C.12).

Table A.25 *Change in Employment in Small-Business-Dominated, Large-Business-Dominated, and Indeterminate Industries, December 1992 and December 1993 (Thousands)*

Industry	Industry Totals		Small-Business-Dominated Industries		Large-Business-Dominated Industries		Indeterminate Industries	
	Absolute Change	Percent	Absolute Change	Percent	Absolute Change	Percent	Absolute Change	Percent
Total, All Industries	1,874.9	2.1	1,330.6	3.2	167.6	0.5	376.7	2.3
Mining	-5.9	-1.0	0.0	0.0	-19.7	-5.5	13.8	6.1
Construction	195.6	4.5	195.6	4.5	NA	NA	NA	NA
Manufacturing	-131.2	-0.7	-1.3	0.0	-151.4	-1.4	21.5	0.5
Transportation	-7.5	-0.1	8.0	0.8	-33.0	-1.1	17.5	1.0
Wholesale Trade	69.4	1.1	63.1	1.7	-29.3	-3.9	35.6	2.3
Retail Trade	464.4	2.3	484.4	4.1	-22.3	-0.3	2.3	0.2
Finance, Insurance, Real Estate	85.4	1.3	16.3	0.7	29.8	1.0	39.3	3.0
Services	1,204.7	4.1	564.5	3.6	393.5	5.1	246.7	4.1

NA = Indicates lack of industry representation within that size category.

Note: Detail may not add to total due to rounding. Data exclude self-employed workers. Small-business-dominated industries are industries in which 60 percent or more of employment is in firms with fewer than 500 employees. Large-business-dominated industries are industries that have 60 percent or more of employment in firms with more than 500 employees. A third set of industries, in which 40.1 to 59.9 percent of employment is in firms with fewer than 500 employees, constitutes an indeterminate group, where dominance is unclear. While 99.9 percent of BLS employment could be allocated overall, only 98 percent could be allocated in the manufacturing and services sectors because of inconsistencies in the Standard Industrial Classification codes.

Chart C.4 Federal Procurement by Major Product/Service Category, FY 1980, FY 1990, and FY 1992

Sources: Federal Procurement Data System, "Special Report S89522A," prepared for the U.S. Small Business Administration, Office of Advocacy (June 7, 1989); idem, "Special Report S92132E," prepared for the U.S. Small Business Administration, Office of Procurement Assistance (May 30, 1991); Eagle Eye Publishers.

rewarding for many small firms. Of the \$65.7 billion in contract actions awarded by the federal government for services in FY 1992, 17.0 percent (\$11.2 billion) was awarded to small firms, up from 15.9 percent (\$8.8 billion) two years earlier (Table C.7). The dollar value of service awards to small firms has increased almost every year since 1979 (Table C.8).

As pressure mounts on federal procuring agencies and departments to lower their overall acquisition levels, it is likely that many will postpone the replacement of hardware and other supplies and equipment and opt instead for maintenance and repair awards in the service categories. This shift should provide growth and expansion opportunities for small service firms with procurement experience, as well as encouraging the first-time entry of other small businesses into federal procurement markets.

Chart C.3 Federal Contract Actions by Major Procurement Agency/Department, FY 1985, FY 1990 and FY 1992

Source: Federal Procurement Data System, *The FPDS Federal Procurement Report*, February 11, 1993; and idem, "Special Report 87458," prepared for the U.S. Small Business Administration, Office of Advocacy (May 19, 1988).

As discretionary programs continue to be trimmed or frozen to meet deficit reduction goals, it is likely that the DOD will continue to lose ground as the primary source of federal contract awards to small firms. Because a significant portion of small firm performance is directly attuned to military procurement cycles, there may be an adverse impact on many small businesses. Moreover, alternate sources, such as the DOE and NASA, have historically allocated substantial portions of their budgets to large-scale programs with high levels of technical sophistication, requiring initial investments beyond the capabilities of most smaller firms.

Some experts believe that small firms, with their inherent flexibility, fit into the niches of marginal spending more effectively than their larger counterparts, and so will perform better than large firms during a downswing in military procurement. With continued military downsizing, there are likely to be new opportunities to test this notion.

Chart C-1 Procurement Dollars and Actions by Size of Action, FY 1992

Source: Federal Procurement Data System; *The FPDS Federal Procurement Report*, February 11, 1993.

Major Procurement Centers

The defense share of gross domestic product (GDP) has been gradually shrinking for the past three decades. Military outlays currently constitute less than 5.0 percent of GDP, compared with 8.8 percent in 1960.⁹

Nevertheless, the DOD remains the single most important center of federal acquisition activity in the federal government. In FY 1992, DOD accounted for 67.7 percent of dollars in contracts over \$25,000, down from 71.1 percent in the preceding year and from DOD's peak share of 80.1 percent in FY 1985 (Table C.3 and Chart C.3).

The Department of Energy (DOE) and the National Aeronautics and Space Administration (NASA) also are important sources of federal contracting activity, accounting for 10.4 percent and 6.8 percent, respectively, of all dollars in federal contract actions over \$25,000 in FY 1992. Over the years, the procurement activities of DOD, DOE, and NASA have formed the bulwark of all federal contracting activity, comprising from 84 to more than 90 percent of the dollar value of major federal contract awards, while all other agencies and departments combined accounted for about 10 to 15 percent.

Sources of Small Business Awards by Agency/Department

The agencies' order of importance as procurement centers shifts slightly when only small business awards are considered. The DOD remains the most important single source of contracting dollars, awarding nearly two-thirds (\$17.7 billion) of the total \$28.3 billion in contract dollars awarded to small firms in FY 1992 (Table C.4).

Note: Actions under \$25,000 are reported in summary; actions over \$25,000 are reported individually. Subcontracting data are available only for individual prime contracts exceeding \$500,000 (\$1 million for construction awards) from federal agencies that project agency procurement of \$10 million or more.

Source: Federal Procurement Data System, Federal Procurement Report (Washington, D.C.: U.S. Government Printing Office, February 11, 1993).

Size of Federal Contract Actions

It is estimated that some 50,000 individual firms compete for a relatively small number of very large purchases and numerous smaller awards.⁶ In FY

⁵ Procurement data (other than subcontract awards) cited here are compiled and reported annually by the Federal Procurement Data Center in the *Federal Procurement Report* (Washington, D.C.: U.S. Government Printing Office, February 11, 1993). Data on subcontracting awards are based on federal agency reports required by Public Law 95-507, Section 221(h). Reports and data from the SBA's Office of Procurement Assistance (OPA) published at the end of this report and titled "The Annual Report on Procurement Preference Goals and Accomplishments," are also based on federal agency reports provided directly to OPA as required by Public Law 95-507. There are three basic differences between the two sets of data: (1) the OPA data include contract actions over and under \$25,000, while the FPDC data used here reflect primarily awards over \$25,000 (except where noted otherwise); (2) the OPA statistics encompass a business population only, while the FPDC data include educational institutions, nonprofit groups, sheltered workshops, state and local governments, and contractors (domestic and foreign) performing contract work outside the United States; and (3) the release dates of the data differ—OPA receives reports from individual agencies immediately after the fiscal year ends, while the FPDC annual fiscal report data are issued several months later.

⁶ Depending on the date and period covered, estimates of the number of individual companies competing for federal contracting awards vary between 42,000 and 50,000. See, for example, Ann Maust, *Analysis of Smaller Firm Participation in Federal Contracting*, report no. PB84-214022, prepared by Research Dimensions, Inc., for the U.S. Small Business Administration, Office of Advocacy (Springfield, Va.: National Technical Information Service, 1984); and Richard Fullenbaum and Mariana McNeill, *Impact of Federal Procurement on Small Business Development*, report no. PB93-144590, prepared for the U.S. Small Business Administration, Office of Advocacy (Springfield, Va.: National Technical Information Service, 1992).

Appendix C

Procurement

Synopsis

The small business share of goods and services purchased by the federal government increased to 30.8 percent in fiscal year 1992 from 29.9 percent the previous year. Small businesses were awarded \$61.6 billion (30.8 percent) of a total of \$199.8 billion in contracts for goods and services. Of the overall total, 19.6 percent (\$39.3 billion) was awarded directly to small firms and at least \$22.3 billion (11.2 percent) was awarded to small businesses as subcontractors.

The level of procurement activity in the federal government, as reflected in contract actions over \$25,000, declined by 6.2 percent (\$11.8 billion) in FY 1992, after increasing during the previous two years. While the small business sector registered a loss of \$617.6 million (2.1 percent)—down from \$28.8 billion in FY 1991 to \$28.2 billion in FY 1992—minority- and women-owned businesses experienced gains of 20.2 percent (\$1.3 billion) and 12.9 percent (\$227.4 million), respectively, over their award levels of the previous year.

Procurement data for the past 10 years indicate that women- and minority-owned businesses have been successful in obtaining awards during a period when overall federal expenditures—and federal procurement award dollars—were being reduced. While total federal and small-business-sector procurement dollars decreased each year from FY 1986 to FY 1989 and again in FY 1992, the value of awards has increased each year since 1982 for women-owned firms and since 1986 for minority-owned firms.

Despite a continuing decline in Department of Defense acquisitions, the DOD continues to be the largest single source of contract awards from the federal government overall and for small business in particular, accounting for 68 percent of all federal contract dollars over \$25,000 and for nearly 63 percent of small business award dollars. Next in importance as procurement award centers for small business are the General Services Administration (\$2.0 billion), the Department of Transportation (\$1.3 billion), the Department of Agriculture (\$1.1 billion), and the National Aeronautics and Space Administration (\$872.1 million), which, taken together, awarded nearly 19 percent of the FY 1992 total dollar awards to small businesses.

In 1980, half of all awards to small firms were for supplies and equipment. Since then, awards for supplies and equipment and construction have declined, while opportunities for providing services and research and development assistance to the federal government have increased. As pressure con-

Appendix **B**

Small Business Financing

Synopsis

Debt borrowing by most small businesses remained flat during 1993. While banks seemed to have eased their credit terms, there was no indication that they had appreciably lowered the strict standards adopted in earlier years. The prime rate, the base rate for most floating-rate loans, remained unusually high despite the fact that money market rates were at historic lows.

Commercial and industrial loans outstanding from U.S. banks declined for the third year in a row. Business loans by the U.S. Small Business Administration, however, showed significant increases over the previous year.

Financing conditions for small dynamic firms remained very favorable. A continued strong stock market provided a strong stimulus to the initial public offering and venture capital markets. Funding for these markets was at historic highs in 1993.

Introduction

After slow growth during the first quarter of 1993, the U.S. economy moved forward and the pace of recovery accelerated. The economy, as measured by real GDP, grew at annual rates of 2.9 percent and 3.1 percent respectively during the third and fourth quarters of 1993. With inflation low and showing no sign of rising and with long-term interest rates remaining very low, prospects for further growth seemed assured.

Overall borrowing paralleled developments in the economy. After a significant fall-off in borrowing during the first quarter of 1993, borrowing increased in most sectors during the second and third quarters, averaging \$623 billion annually (Table B.2). The largest increase in borrowing occurred in the household sector. With record low interest rates for mortgage loans, home equity lines, and other consumer loans, borrowing by the household sector increased to an annual rate of \$225.2 billion; in fact, household borrowing during the second and third quarters averaged \$269 billion at annual rates, compared to an annual rate of \$197 billion in 1990 through 1992 (Table B.2).

Federal government borrowing declined significantly during 1993 as the federal budget deficit abated, falling from \$304 billion in 1992 to an average annual rate of \$252 billion during the first three quarters of 1993. Borrowing by state and local governments remained at about the same level as in the previous two years.

sized businesses, real estate lending and appraisals, appeals of examination decisions and complaint handling, examination processes and procedures, and paperwork and regulatory burdens.

Lending to Small Businesses

On March 30, 1993, the four banking regulators—the Federal Deposit Insurance Corporation, the Federal Reserve Board, the Comptroller of the Currency, and the Office of Thrift Supervision—issued a joint policy statement that would permit financial institutions to make character loans (loans made on the basis of “character” evaluations) to small businesses. Specifically, a financial institution that is adequately capitalized and well managed (with a 1 or 2 CAMEL rating),¹⁶ would be allowed, with minimal documentation, to make small business loans of up to 20 percent of the institution’s total capital.

¹⁶ Federal financial supervisory agencies conduct annual audits and rate individual institutions’ financial conditions, that is, their capital adequacy, asset quality, management, earnings, and liquidity (CAMEL). CAMEL ratings “1” and “2” are the top two quality ratings an institution can receive.

Lending for Real Estate

Under the real estate appraisal requirements of the Financial Institutions Reform, Recovery, and Enforcement Act (FIRREA) and the Federal Deposit Insurance Corporation Improvement Act (FDICIA), any loan that involves real estate valued in excess of \$100,000 must have an appraisal completed by a licensed and certified real estate appraiser. Periodic appraisal is also required for existing loans, even other loans for which real estate was used as collateral. The added cost of the appraisals and the burden placed on small business borrowers has been substantial. Regulators have been examining options such as foregoing the certified appraisal requirement and raising the threshold for certified appraisals.

Appeals on Lending Decisions

One reason financial institutions have been reluctant to lend to small businesses is the aggressiveness of examiners in classifying small business loans as "problem loans." The result is that bankers do not make loans that have even the slightest possibility of being classified "problematic." Moreover, there was often an inadequate process for handling bankers' complaints or appeals about loans that had been negatively classified by the examiners. The regulators are reviewing the appeals process for bankers and designating within each of the banking regulatory agencies an office to respond to complaints from the general public.

Examination Procedures

Where the law permits it, new federal initiatives would require more coordination of federal examination processes and procedures with respect to financial institutions. Currently, some financial institutions are under the jurisdiction of more than one federal regulator, as well as state banking agencies, and must submit to costly multiple examinations. Most affected by these examinations are small institutions, which may have to halt almost all bank operations while an examination is in progress.

Paperwork and Regulatory Burdens

With the enactment of FDICIA and FIRREA and expanded enforcement of the Community Reinvestment Act (CRA), the paperwork burden on financial institutions has increased significantly. A study by the Federal Financial Institutions Examination Council estimated the cost of compliance to be as high as \$14 billion annually.¹⁸ Policymakers are reviewing the findings of that study

¹⁸ Federal Financial Institutions Examination Council, "Study on Regulatory Burden," December 1992. According to Alan Greenspan, chairman of the Board of Governors of the Federal Reserve System, and the banking trade associations, it is not any single paperwork requirement or regulatory burden that is the problem, but the cumulative effect of all laws and regulations. The banking trade associations point to the Community Reinvestment Act, the Truth in Lending Act, and the Bank Secrecy Act as especially burdensome.

loans outstanding stood at \$15.1 billion on 104,258 loans on September 30, 1993, a 15.3-percent increase over the dollar value in the previous year.

In response to the strong demand for government-guaranteed loans in a still uncertain recovery, SBA has recently initiated several new programs to provide loan guarantees to different types of borrowers. Examples include very small or "micro" loans and an export revolving line of credit. On August 13, 1993, President Clinton signed into law the Small Business Guaranteed Credit Enhancement Act of 1993, which increased appropriations for SBA's 7(a) business guaranteed loan program to \$7.155 billion for FY 1993 and to \$8.458 billion for FY 1994.

Finance Companies

Business loans by finance companies have increased little over the past three years. For the first nine months of 1993, total business receivables outstanding for finance companies amounted to \$287.2 billion, a decrease at an annual rate of 4.5 percent from December 1992 (Table B.10).

How important are finance companies as suppliers of funds to small firms? Statistics from the 1989 National Survey of Small Business Finances provided the first glimpse. Finance company lending to small businesses accounted for about one-fourth of total business credit outstanding of finance companies in 1987.²³ Finance companies were very active in the vehicle and equipment loan markets, somewhat active in leasing and extending other loans to larger small businesses, and less active in lines of credit and mortgage lending (Table B.11 and Charts B.8 and B.9).²⁴ While most very small firms obtained little financing from finance companies, larger small firms (with 100 to 499 employees) obtained 14 percent of total financing from finance companies (Table B.12 and Chart B.10).

Borrowing in the Public Issue Markets

Stimulated by very low money market and deposit rates from banks, markets for stocks and bonds continued to be very active in 1993. Continued declines in corporate bond rates encouraged further borrowing by corporate America. Net issues of corporate bonds averaged \$65 billion (annual value) during the first three quarters of 1993, compared with \$79 billion and \$67 billion in 1992 and 1991, respectively.²⁵ Low interest rates on time and savings deposits

²³ Total business loans outstanding (including leases, lines of credit, mortgages, and vehicle, equipment, and other loans) by finance companies to 3.5 million small businesses amounted to about \$50 billion at the end of 1987 (the reference date of data collection), according to estimates from the National Survey of Small Business Finances. The small business population used in the survey was Dun and Bradstreet's Dun's Market Identifier (DMI) file.

²⁴ The Federal Reserve Board and the U.S. Small Business Administration will be conducting another survey on small business finances in 1994 with results expected to be available in 1995.

²⁵ The gross issuance of corporate bonds surpassed the record high reached in 1992. See Board of Governors of the Federal Reserve System, *Flow of Funds Accounts, Third Quarter 1993: Accounts, Flows, and Outstandings* (December 1993) and *Federal Reserve Bulletin* (various issues).

ume issued since 1980.²⁸ Moreover, new issues of venture-capital-backed companies reached new highs again in 1993; a total of 165 offerings valued at \$4.86 billion were issued.

Fundraising by venture capital funds continued to be very active in 1993. Total funds raised by venture capital firms amounted to \$2.5 billion, the same level as in 1992 (Table B.14). Pension funds remained the most important contributor to the capital pool, accounting for 42 percent of total funding (Table B.15).²⁹

Disbursements to venture-capital-funded companies also increased to \$1.7 billion during the first half of 1993, a 21-percent increase over disburse-

²⁸ Changes in estimating methods made it difficult to compare offering estimates for the years 1993 and 1987, another record year in IPO offerings. Statistics for small issuers for 1993 were obtained using a more precise definition. Only those offerings which had prospectus and asset size information were included in the estimates.

Equity Enhancement Act of 1992 (P.L. 102-366) also authorized SBA to issue participating preferred securities to provide equity-type financing to SBICs.³¹

Conclusion

Overall, small business borrowing of debt capital declined further in 1993 despite a strong recovery during the last two quarters of the year. Small businesses, displaying caution, continued to delay increases in capital expenditures and inventory. Declines in bank loan rates also lagged behind the

³¹ Debt-type financing provided by the SBA to SBIC companies was thought to be one of the major factors contributing to the liquidity problems encountered by many SBICs.

¹ All estimates are stock estimates valued at the end of 1992, unless otherwise noted. Small business includes all noncorporate business and small corporations with assets under \$25 million.

² Estimates by the Federal Reserve Board for nonfarm, nonfinancial corporations and nonfarm, noncorporate businesses. Total assets and debt for small corporations were estimated by applying 17.5 percent and 19.0 percent, respectively, to that of all corporations. Net worth is treated as a residual. (These ratios were estimated by using corporate tax return data published by the U.S. Department of the Treasury, Internal Revenue Service).

³ These estimates are obtained from sources using different methodologies. They are not strictly comparable and should not be summed for a total.

⁴ For nonfarm, noncorporate business only. Major revisions have been made in the data.

⁵ Total commercial and industrial loans outstanding of banks other than large weekly reporting banks are used as a proxy for loans to small businesses.

⁶ Totals for small business are estimated by applying 20 percent to trade credit for all nonfinancial corporations for the small corporation share.

⁷ The total estimated cumulative value of initial public offerings of common stock for the period 1976-1987.

NA = Not available.

Equity Enhancement Act of 1992 (P.L. 102-366) also authorized SBA to issue participating preferred securities to provide equity-type financing to SBICs.³¹

Conclusion

Overall, small business borrowing of debt capital declined further in 1993 despite a strong recovery during the last two quarters of the year. Small businesses, displaying caution, continued to delay increases in capital expenditures and inventory. Declines in bank loan rates also lagged behind the

³¹ Debt-type financing provided by the SBA to SBIC companies was thought to be one of the major factors contributing to the liquidity problems encountered by many SBICs.

ume issued since 1980.²⁸ Moreover, new issues of venture-capital-backed companies reached new highs again in 1993; a total of 165 offerings valued at \$4.86 billion were issued.

Fundraising by venture capital funds continued to be very active in 1993. Total funds raised by venture capital firms amounted to \$2.5 billion, the same level as in 1992 (Table B.14). Pension funds remained the most important contributor to the capital pool, accounting for 42 percent of total funding (Table B.15).²⁹

Disbursements to venture-capital-funded companies also increased to \$1.7 billion during the first half of 1993, a 21-percent increase over disburse-

²⁸ Changes in estimating methods made it difficult to compare offering estimates for the years 1993 and 1987, another record year in IPO offerings. Statistics for small issuers for 1993 were obtained using a more precise definition. Only those offerings which had prospectus and asset size information were included in the estimates.

loans outstanding stood at \$15.1 billion on 104,258 loans on September 30, 1993, a 15.3-percent increase over the dollar value in the previous year.

In response to the strong demand for government-guaranteed loans in a still uncertain recovery, SBA has recently initiated several new programs to provide loan guarantees to different types of borrowers. Examples include very small or "micro" loans and an export revolving line of credit. On August 13, 1993, President Clinton signed into law the Small Business Guaranteed Credit Enhancement Act of 1993, which increased appropriations for SBA's 7(a) business guaranteed loan program to \$7.155 billion for FY 1993 and to \$8.458 billion for FY 1994.

Finance Companies

Business loans by finance companies have increased little over the past three years. For the first nine months of 1993, total business receivables outstanding for finance companies amounted to \$287.2 billion, a decrease at an annual rate of 4.5 percent from December 1992 (Table B.10).

How important are finance companies as suppliers of funds to small firms? Statistics from the 1989 National Survey of Small Business Finances provided the first glimpse. Finance company lending to small businesses accounted for about one-fourth of total business credit outstanding of finance companies in 1987.²³ Finance companies were very active in the vehicle and equipment loan markets, somewhat active in leasing and extending other loans to larger small businesses, and less active in lines of credit and mortgage lending (Table B.11 and Charts B.8 and B.9).²⁴ While most very small firms obtained little financing from finance companies, larger small firms (with 100 to 499 employees) obtained 14 percent of total financing from finance companies (Table B.12 and Chart B.10).

Borrowing in the Public Issue Markets

Stimulated by very low money market and deposit rates from banks, markets for stocks and bonds continued to be very active in 1993. Continued declines in corporate bond rates encouraged further borrowing by corporate America. Net issues of corporate bonds averaged \$65 billion (annual value) during the first three quarters of 1993, compared with \$79 billion and \$67 billion in 1992 and 1991, respectively.²⁵ Low interest rates on time and savings deposits

²³ Total business loans outstanding (including leases, lines of credit, mortgages, and vehicle, equipment, and other loans) by finance companies to 3.5 million small businesses amounted to about \$50 billion at the end of 1987 (the reference date of data collection), according to estimates from the National Survey of Small Business Finances. The small business population used in the survey was Dun and Bradstreet's Dun's Market Identifier (DMI) file.

²⁴ The Federal Reserve Board and the U.S. Small Business Administration will be conducting another survey on small business finances in 1994 with results expected to be available in 1995.

²⁵ The gross issuance of corporate bonds surpassed the record high reached in 1992. See Board of Governors of the Federal Reserve System, *Flow of Funds Accounts, Third Quarter 1993: Accounts, Flows, and Outstandings* (December 1993) and *Federal Reserve Bulletin* (various issues).

Source: Special tabulations of June 1993 Call Reports (*Consolidated Reports of Condition and Income for U.S. Banks*) prepared for the U.S. Small Business Administration, Office of Advocacy by James Kolari, Texas A&M University.

Lending for Real Estate

Under the real estate appraisal requirements of the Financial Institutions Reform, Recovery, and Enforcement Act (FIRREA) and the Federal Deposit Insurance Corporation Improvement Act (FDICIA), any loan that involves real estate valued in excess of \$100,000 must have an appraisal completed by a licensed and certified real estate appraiser. Periodic appraisal is also required for existing loans, even other loans for which real estate was used as collateral. The added cost of the appraisals and the burden placed on small business borrowers has been substantial. Regulators have been examining options such as foregoing the certified appraisal requirement and raising the threshold for certified appraisals.

Appeals on Lending Decisions

One reason financial institutions have been reluctant to lend to small businesses is the aggressiveness of examiners in classifying small business loans as "problem loans." The result is that bankers do not make loans that have even the slightest possibility of being classified "problematic." Moreover, there was often an inadequate process for handling bankers' complaints or appeals about loans that had been negatively classified by the examiners. The regulators are reviewing the appeals process for bankers and designating within each of the banking regulatory agencies an office to respond to complaints from the general public.

Examination Procedures

Where the law permits it, new federal initiatives would require more coordination of federal examination processes and procedures with respect to financial institutions. Currently, some financial institutions are under the jurisdiction of more than one federal regulator, as well as state banking agencies, and must submit to costly multiple examinations. Most affected by these examinations are small institutions, which may have to halt almost all bank operations while an examination is in progress.

Paperwork and Regulatory Burdens

With the enactment of FDICIA and FIRREA and expanded enforcement of the Community Reinvestment Act (CRA), the paperwork burden on financial institutions has increased significantly. A study by the Federal Financial Institutions Examination Council estimated the cost of compliance to be as high as \$14 billion annually.¹⁸ Policymakers are reviewing the findings of that study

¹⁸ Federal Financial Institutions Examination Council, "Study on Regulatory Burden," December 1992. According to Alan Greenspan, chairman of the Board of Governors of the Federal Reserve System, and the banking trade associations, it is not any single paperwork requirement or regulatory burden that is the problem, but the cumulative effect of all laws and regulations. The banking trade associations point to the Community Reinvestment Act, the Truth in Lending Act, and the Bank Secrecy Act as especially burdensome.

Table B.11 Sources of Business Loans by Type and by Size of Borrower, 1987 (Percent)

Type of Credit by Business Size	All Institutions	Banks	Finance Companies	Other Institutions

sized businesses, real estate lending and appraisals, appeals of examination decisions and complaint handling, examination processes and procedures, and paperwork and regulatory burdens.

Lending to Small Businesses

On March 30, 1993, the four banking regulators—the Federal Deposit Insurance Corporation, the Federal Reserve Board, the Comptroller of the Currency, and the Office of Thrift Supervision—issued a joint policy statement that would permit financial institutions to make character loans (loans made on the basis of “character” evaluations) to small businesses. Specifically, a financial institution that is adequately capitalized and well managed (with a 1 or 2 CAMEL rating),¹⁶ would be allowed, with minimal documentation, to make small business loans of up to 20 percent of the institution’s total capital.

¹⁶ Federal financial supervisory agencies conduct annual audits and rate individual institutions’ financial conditions, that is, their capital adequacy, asset quality, management, earnings, and liquidity (CAMEL). CAMEL ratings “1” and “2” are the top two quality ratings an institution can receive.

Appendix **B**

Small Business Financing

Synopsis

Debt borrowing by most small businesses remained flat during 1993. While banks seemed to have eased their credit terms, there was no indication that they had appreciably lowered the strict standards adopted in earlier years. The prime rate, the base rate for most floating-rate loans, remained unusually high despite the fact that money market rates were at historic lows.

Commercial and industrial loans outstanding from U.S. banks declined for the third year in a row. Business loans by the U.S. Small Business Administration, however, showed significant increases over the previous year.

Financing conditions for small dynamic firms remained very favorable. A continued strong stock market provided a strong stimulus to the initial public offering and venture capital markets. Funding for these markets was at historic highs in 1993.

Introduction

After slow growth during the first quarter of 1993, the U.S. economy moved forward and the pace of recovery accelerated. The economy, as measured by real GDP, grew at annual rates of 2.9 percent and 3.1 percent respectively during the third and fourth quarters of 1993. With inflation low and showing no sign of rising and with long-term interest rates remaining very low, prospects for further growth seemed assured.

Overall borrowing paralleled developments in the economy. After a significant fall-off in borrowing during the first quarter of 1993, borrowing increased in most sectors during the second and third quarters, averaging \$623 billion annually (Table B.2). The largest increase in borrowing occurred in the household sector. With record low interest rates for mortgage loans, home equity lines, and other consumer loans, borrowing by the household sector increased to an annual rate of \$225.2 billion; in fact, household borrowing during the second and third quarters averaged \$269 billion at annual rates, compared to an annual rate of \$197 billion in 1990 through 1992 (Table B.2).

Federal government borrowing declined significantly during 1993 as the federal budget deficit abated, falling from \$304 billion in 1992 to an average annual rate of \$252 billion during the first three quarters of 1993. Borrowing by state and local governments remained at about the same level as in the previous two years.

Procurement

Synopsis

The small business share of goods and services purchased by the federal government increased to 30.8 percent in fiscal year 1992 from 29.9 percent the previous year. Small businesses were awarded \$61.6 billion (30.8 percent) of a total of \$199.8 billion in contracts for goods and services. Of the overall total, 19.6 percent (\$39.3 billion) was awarded directly to small firms and at least \$22.3 billion (11.2 percent) was awarded to small businesses as subcontractors.

The level of procurement activity in the federal government, as reflected in contract actions over \$25,000, declined by 6.2 percent (\$11.8 billion) in FY 1992, after increasing during the previous two years. While the small business sector registered a loss of \$617.6 million (2.1 percent)—down from \$28.8 billion in FY 1991 to \$28.2 billion in FY 1992—minority- and women-owned businesses experienced gains of 20.2 percent (\$1.3 billion) and 12.9 percent (\$227.4 million), respectively, over their award levels of the previous year.

Procurement data for the past 10 years indicate that women- and minority-owned businesses have been successful in obtaining awards during a period when overall federal expenditures—and federal procurement award dollars—were being reduced. While total federal and small-business-sector procurement dollars decreased each year from FY 1986 to FY 1989 and again in FY 1992, the value of awards has increased each year since 1982 for women-owned firms and since 1986 for minority-owned firms.

Despite a continuing decline in Department of Defense acquisitions, the DOD continues to be the largest single source of contract awards from the federal government overall and for small business in particular, accounting for 68 percent of all federal contract dollars over \$25,000 and for nearly 63 percent of small business award dollars. Next in importance as procurement award centers for small business are the General Services Administration (\$2.0 billion), the Department of Transportation (\$1.3 billion), the Department of Agriculture (\$1.1 billion), and the National Aeronautics and Space Administration (\$872.1 million), which, taken together, awarded nearly 19 percent of the FY 1992 total dollar awards to small businesses.

In 1980, half of all awards to small firms were for supplies and equipment. Since then, awards for supplies and equipment and construction have declined, while opportunities for providing services and research and development assistance to the federal government have increased. As pressure con-

subcontracting awards from prime contractors under contract to the federal government (See Table).⁵

Table Dollars Awarded to Small Firms in Federal Contracts, FY 1992

	Thousands of Dollars		Small Business Share (Percent)
	Total	Small Business	
Total	199,806,499	61,584,618	30.8
Total Prime Contract Actions	199,806,499	39,259,718	19.6
Under \$25,000	22,020,118	11,029,969	50.1
Over \$25,000	177,786,381	28,229,749	15.9
Subcontracts to Small Firms	NA	22,324,900	NA

NA = Not applicable.

Note: Actions under \$25,000 are reported in summary; actions over \$25,000 are reported individually. Subcontracting data are available only for individual prime contracts exceeding \$500,000 (\$1 million for construction awards) from federal agencies that project agency procurement of \$10 million or more.

Source: Federal Procurement Data System, Federal Procurement Report (Washington, D.C.: U.S. Government Printing Office, February 11, 1993).

Size of Federal Contract Actions

It is estimated that some 50,000 individual firms compete for a relatively small number of very large purchases and numerous smaller awards.⁶ In FY

⁵ Procurement data (other than subcontract awards) cited here are compiled and reported annually by the Federal Procurement Data Center in the *Federal Procurement Report* (Washington, D.C.: U.S. Government Printing Office, February 11, 1993). Data on subcontracting awards are based on federal agency reports required by Public Law 95-507, Section 221(h). Reports and data from the SBA's Office of Procurement Assistance (OPA) published at the end of this report and titled "The Annual Report on Procurement Preference Goals and Accomplishments," are also based on federal agency reports provided directly to OPA as required by Public Law 95-507. There are three basic differences between the two sets of data: (1) the OPA data include contract actions over and under \$25,000, while the FPDC data used here reflect primarily awards over \$25,000 (except where noted otherwise); (2) the OPA statistics encompass a business population only, while the FPDC data include educational institutions, nonprofit groups, sheltered workshops, state and local governments, and contractors (domestic and foreign) performing contract work outside the United States; and (3) the release dates of the data differ—OPA receives reports from individual agencies immediately after the fiscal year ends, while the FPDC annual fiscal report data are issued several months later.

⁶ Depending on the date and period covered, estimates of the number of individual companies competing for federal contracting awards vary between 42,000 and 50,000. See, for example, Ann Maust, *Analysis of Smaller Firm Participation in Federal Contracting*, report no. PB84-214022, prepared by Research Dimensions, Inc., for the U.S. Small Business Administration, Office of Advocacy (Springfield, Va.: National Technical Information Service, 1984); and Richard Fullenbaum and Mariana McNeill, *Impact of Federal Procurement on Small Business Development*, report no. PB93-144590, prepared for the U.S. Small Business Administration, Office of Advocacy (Springfield, Va.: National Technical Information Service, 1992).

Procurement Dollars and Actions by Size of Action, FY 1992

Procurement Dollars
Total = \$199.8 Billion

Procurement Actions
Total = 20,150,973

Source: Federal Procurement Data System, *The FPDS Federal Procurement Report*, February 1993.

Major Procurement Centers

The defense share of gross domestic product (GDP) has been gradually shrinking for the past three decades. Military outlays currently constitute less than 5.0 percent of GDP, compared with 8.8 percent in 1960.⁹

Nevertheless, the DOD remains the single most important center of federal acquisition activity in the federal government. In FY 1992, DOD accounted for 67.7 percent of dollars in contracts over \$25,000, down from 71.1 percent in the preceding year and from DOD's peak share of 80.1 percent in FY 1985 (Table C.3 and Chart C.3).

The Department of Energy (DOE) and the National Aeronautics and Space Administration (NASA) are also important sources of federal contracting activity, accounting for 10.4 percent and 6.8 percent, respectively, of all dollars in federal contract actions over \$25,000 in FY 1992. Over the years, the procurement activities of DOD, DOE, and NASA have formed the bulwark of all federal contracting activity, comprising from 84 to more than 90 percent of the dollar value of major federal contract awards, while all other agencies and departments combined accounted for about 10 to 15 percent.

Sources of Small Business Awards by Agency/Department

The agencies' order of importance as procurement centers shifts slightly when only small business awards are considered. The DOD remains the most important single source of contracting dollars, awarding nearly two-thirds (\$17.7 billion) of the total \$28.3 billion in contract dollars awarded to small firms in FY 1992 (Table C.4).

⁹ Department of Commerce, Bureau of Economic Analysis, *Survey of Current Business* (various issues, 1992-1994), (Washington, D.C.: U.S. Government Printing Office, February 1994).

Federal Contract Actions by Major Procurement Agency/Department, FY 1985, FY 1990 and FY 1992

Source: Federal Procurement Data System, *The FPDS, Federal Procurement Report*, February 11, 1993; and *idem*, "Special Report 87458," prepared for the U.S. Small Business Administration, Office of Advocacy (May 19, 1988).

As discretionary programs continue to be trimmed or frozen to meet deficit reduction goals, it is likely that the DOD will continue to lose ground as the primary source of federal contract awards to small firms. Because a significant portion of small firm performance is directly attuned to military procurement cycles, there may be an adverse impact on many small businesses. Moreover, alternate sources, such as the DOE and NASA, have historically allocated substantial portions of their budgets to large-scale programs with high levels of technical sophistication, requiring initial investments beyond the capabilities of most smaller firms.

Some experts believe that small firms, with their inherent flexibility, fit into the niches of marginal spending more effectively than their larger counterparts, and so will perform better than large firms during a downswing in military procurement. With continued military downsizing, there are likely to be new opportunities to test this notion.

Federal Procurement by Major Product/Service Category,
 FY 1980, FY 1990, and FY 1992

Sources: Federal Procurement Data System, "Special Report S89522A," prepared for the U.S. Small Business Administration, Office of Advocacy (June 7, 1989); idem, "Special Report S92132E," prepared for the U.S. Small Business Administration, Office of Procurement Assistance (May 30, 1991); Eagle Eye Publishers.

rewarding for many small firms. Of the \$65.7 billion in contract actions awarded by the federal government for services in FY 1992, 17.0 percent (\$11.2 billion) was awarded to small firms, up from 15.9 percent (\$8.8 billion) two years earlier (Table C.7). The dollar value of service awards to small firms has increased almost every year since 1979 (Table C.8).

As pressure mounts on federal procuring agencies and departments to lower their overall acquisition levels, it is likely that many will postpone the replacement of hardware and other supplies and equipment and opt instead for maintenance and repair awards in the service categories. This shift should provide growth and expansion opportunities for small service firms with procurement experience, as well as encouraging the first-time entry of other small businesses into federal procurement markets.

Table A.25 *Change in Employment in Small-Business-Dominated, Large-Business-Dominated, and Indeterminate Industries, December 1992 and December 1993 (Thousands)*

Industry	Industry Totals		Small-Business-Dominated Industries		Large-Business-Dominated Industries		Indeterminate Industries	
	Absolute Change	Percent	Absolute Change	Percent	Absolute Change	Percent	Absolute Change	Percent
Total, All Industries	1,874.9	2.1	1,330.6	3.2	167.6	0.5	376.7	2.3
Mining	-5.9	-1.0	0.0	0.0	-19.7	-5.5	13.8	6.1
Construction	195.6	4.5	195.6	4.5	NA	NA	NA	NA
Manufacturing	-131.2	-0.7	-1.3	0.0	-151.4	-1.4	21.5	0.5
Transportation	-7.5	-0.1	8.0	0.8	-33.0	-1.1	17.5	1.0

Retail Trade	464.4	2.3	484.4	4.1	-22.3	-0.3	2.3	0.2
Finance, Insurance, Real Estate	85.4	1.3	16.3	0.7	29.8	1.0	39.3	3.0
Services	1,204.7	4.1	564.5	3.6	393.5	5.1	246.7	4.1

NA = Indicates lack of industry representation within that size category.

Note: Detail may not add to total due to rounding. Data exclude self-employed workers. Small-business-dominated industries are industries in which 60 percent or more of employment is in firms with fewer than 500 employees. Large-business-dominated industries are industries that have 60 percent or more of employment in firms with more than 500 employees. A third set of industries, in which 40.1 to 59.9 percent of employment is in firms with fewer than 500 employees, constitutes an indeterminate group, where dominance is unclear. While 99.9 percent of BLS employment could be allocated overall, only 98 percent could be allocated in the manufacturing and services sectors because of inconsistencies in the Standard Industrial Classification codes.

Source: Adapted by the U.S. Small Business Administration, Office of Advocacy, from the U.S. Department of Labor, Bureau of Labor Statistics, *Employment and Earnings* (February 1994), Table B.2.

The small business share increased in about half of the states between FY 1991 and FY 1992 and declined in the other half. The largest share gain for small firms was in West Virginia, where the small business share more than doubled, from 18.0 to 41.4 percent; the largest loss was in Georgia, where the small business share declined from 23.3 to 11.2 percent.

Subcontracting by Major Purchasing Agency

Data on subcontracts to small businesses are available only from federal agencies that project agency procurement of \$10 million or more and only for individual prime contracts exceeding \$500,000 (except for construction awards, for which the data include only awards in excess of \$1 million). Subcontracting dollars represent a very substantial source of revenue to small firms, especially those specialized firms equipped to perform only part of a large or complex project. The inclusion of subcontracts to small firms raises the small business share of procurement from just under 20 percent of the total value of federal contract actions to over 30 percent in FY 1992.

Although the dollar value of subcontracts varies considerably from year to year, the trend has been generally upward in recent years for most of the major federal procurement centers. Of the 23 major federal agencies and departments reporting for both FY 1992 and FY 1991, 15 show an increase in dollars subcontracted to small businesses over FY 1991 levels (Table C.10).

Paralleling federal prime contracting patterns, subcontracting awards to small firms emanate primarily from the prime contractors to the DOD (\$18.2 billion), the National Aeronautics and Space Administration (\$1.6 billion), and the General Services Administration (\$873.6 million) (Table C.10).

In FY 1992, small businesses also obtained significant subcontract awards working with prime contractors to the Departments of Veterans Affairs (\$610.4 million), Energy (\$233.7 million), and the Treasury (\$155.1 million), the Environmental Protection Agency (\$143.4 million), and the Department of Health and Human Resources (\$108.1 million).

Federal Contract Awards to Minority- and Women-Owned Businesses

Women- and minority-owned businesses are the most rapidly growing segments of federal contracting markets. From FY 1991 to FY 1992, women- and minority-owned businesses increased their share of the value of awards over \$25,000 by 12.9 percent and 20.2 percent, respectively, in the face of declining dollar amounts to small businesses overall and decreasing procurement programs of the federal government (Table C.11). Seventy-seven percent of the FY 1992 dollar awards to women-owned firms and 94 percent of the awards to minority-owned firms were in contract actions over \$25,000 (Table C.12).

APPENDIX A TABLES

Federal Contract Actions to Small, Minority-Owned, and Women-Owned Businesses, FY 1992

Source: Federal Procurement Data System, *The FPDS Federal Procurement Report*, February 11, 1993.

Legislative debates in 1994 resulted in the passage of the Federal Acquisition Streamlining Act (FASA). The most significant reform measures included in the law were as follows:

- The small purchase threshold is increased from \$25,000 to \$100,000.
- Federal agencies are encouraged to purchase commercial items and exemptions are provided from certain socioeconomic statutes.
- A governmentwide electronic data interchange (EDI) system will be established to notify potential contractors of procurement opportunities.
- Waivers of certain laws are authorized for certain agency procurements.
- The instances in which agency managers are required to buy from GSA's Multiple Award Schedule are reduced.
- A new 5-percent governmentwide procurement goal is established for women-owned businesses.

8731	Physical and Biological Research	231.7	231.2	-0.5	-0.2

¹ Represents sum of three-digit components, which are also shown separately.

² Represents two-digit industries with three-digit industry breakout. However, due to the inability to distribute all industry employment, industry components do not equal the specified two-digit total. If the industry was clearly large-business-dominated or small-business-dominated, the two-digit industry was listed to represent the overall two-digit industry total.

³ Each two-digit subcomponent industry reflects both the sum of the separately enumerated three-digit components and a residual component representing industries not covered by the Bureau of Labor Statistics.

Note: Excludes self-employed workers. Large-business-dominated industries are industries in which a minimum of 60 percent of employment is in firms with more than 500 employees. While 89.9 percent of industry employment was allocated to small, large, or indeterminate industries, about 2 percent of employment in the manufacturing and service sectors could not be allocated because of SIC code inconsistencies.

¹ A total of 62 agencies are represented in the total dollars for FY 1992; the 29 organizations listed are those agencies that awarded at least \$15 million in contract actions over \$25,000 in FY 1992. In the aggregate, these organizations accounted for more than 99 percent of the dollar volume of awards over \$25,000 in FY 1992.

² The negative small business figures for the Tennessee Valley Authority in FY 1985 were due to deobligations in multiyear contracts for the purchase of coal that had fallen in price.

NA = Not available.

Note: Starting in FY 1983, the dollar threshold for reporting detailed information on DOD procurement actions increased from \$10,000 to \$25,000. For civilian agencies, a similar change was made starting in FY 1986.

¹ Represents sum of three-digit components, which are also shown separately.

² Represents two-digit industries with three-digit industry breakout. However, due to the inability to distribute all industry employment, industry components do not equal the specified two-digit total. If the industry was clearly large-business-dominated or small-business-dominated, the two-digit industry was listed to represent the overall two-digit industry total.

³ Each two-digit subcomponent industry reflects both the sum of the separately enumerated three-digit components and a residual component representing industries not covered by the Bureau of Labor Statistics.

n.e.c. = Not elsewhere classified.

Note: Excludes self-employed workers. Small-business-dominated industries are industries in which a minimum of 60 percent of employment is in firms with fewer than 500 employees. While 99.9 percent of industry employment was allocated to small, large, or indeterminate industries, about 2 percent of employment in the manufacturing and service sectors could not be allocated because of SIC code inconsistencies.

Table A.21 *Business Dissolution Rates by Firm Size and Number of Jobs Created (Percent)*

Age of Business (Minimum Years)	All Firms	Firms Creating No Jobs	Firms Creating 1-4 Jobs	Firms Creating 5+ Jobs
2	23.7	29.9	8.3	6.0
4	52.7	64.8	19.6	13.1
6	62.2	74.0	23.5	21.1
8	70.9	81.5	46.5	30.0
10*	79.0	90.5	59.1	37.6

*Estimated using log linear regression models.

Note: Firms were traced beginning in 1976 and observed, if available, every other year beginning in 1978 and ending in 1990. Business dissolution includes businesses that disappear for any reason at all, including failure, bankruptcy, owner retirement, owner health, or the desire to enter a more profitable endeavor. It has been estimated that about 15 percent of business dissolutions represent actual failures.

Letter of Transmittal

Mr. President:

In accordance with Public Law 100-656, Section 503, we are pleased to present, for your consideration, the fiscal year 1992 report on participation in federal procurement by small business concerns and small business concerns owned and controlled by socially and economically disadvantaged individuals.

An analysis of the FY 1992 procurement preference goals and achievements against these goals indicates the Executive Branch exceeded the overall small business prime contract goal of 21.1 percent of the total dollars awarded, with the agencies achieving 22.9 percent. The small business subcontracting goal was 38.4 percent of total subcontract dollars awarded, with the agencies achieving 38.1 percent. The prime contract goal for women-owned small businesses was 1.4 percent of total dollars awarded, with the agencies achieving 1.6 percent; and, the subcontract goal for women-owned small businesses was 0.2 percent of total subcontract dollars awarded, with the agencies achieving 1.8 percent. The 8(a) program's prime contract goal was 2.7 percent, with the agencies achieving 2.7 percent; the small disadvantaged business prime contract goal was 2.3 percent, with the agencies achieving 2.1 percent; and, the small disadvantaged business subcontracting goal was 5.1 percent of all subcontract dollars awarded, with the agencies achieving 4.3 percent.

Please note that we have restricted our analysis and comments to the 18 federal agencies with the largest contracting budgets. These 18 agencies represent approximately 99 percent of federal procurement contract awards reported to the Small Business Administration.

Sincerely,

PHILIP LADER
Administrator

The Annual Report on Federal Procurement Preference Goals

Synopsis

By law, federal agencies are required to give small and small disadvantaged businesses the "maximum practicable opportunity" to participate in federal contracts for goods and services. To this end, agencies consult annually with the U.S. Small Business Administration (SBA) and set goals for the percentage of dollars to be awarded through prime contracts or subcontracts to small firms, small disadvantaged firms (including those participating in the 8(a) program), women-owned firms, and firms in designated "labor surplus areas." At the end of the year, agencies report to the SBA on their success in meeting the goals.

In fiscal year 1992, the executive branch of the federal government exceeded its overall small business prime contract goal of 21.1 percent by awarding 22.9 percent (\$41.3 billion) of a total of \$180.4 billion in federal prime contracts to small business. Federal agency prime contractors also exceeded the 1.4-percent goal for the women-owned business share of prime contracts to small business, awarding small women-owned firms 1.6 percent (\$2.9 billion) of a total of \$180.4 billion in federal prime contracts to small business, and exceeded the 0.2-percent goal for the women-owned small business share of subcontract dollars, awarding small firms 1.8 percent (\$1.1 billion) of a total of \$58.7 billion in subcontracting dollars. Federal agencies met the 2.7-percent goal for the 8(a) small business share of prime contracts, awarding 8(a) firms 2.7 percent (\$4.9 billion) of a total \$180.4 billion in federal prime contract dollars (Chart 1). These achievements were possible because of the outstanding efforts of many individual agencies.

In several categories, however, the overall federal effort fell short of established goals. Agencies awarded 2.1 percent of prime contract dollars to small disadvantaged businesses—less than the 2.3-percent goal. The goal for subcontracting dollars to small firms was 38.4 percent; agencies achieved 38.1 percent. The goal for small disadvantaged businesses was 5.1 percent; agencies achieved 4.3 percent (Chart 2).

In this report, the SBA summarizes federal agency performance in meeting their goals and provides detailed comments on the 18 federal agencies with the largest contracting budgets. In the goal-setting process, agencies are encouraged to set aggressive goals and make strong efforts to meet them; many were able to do that in several categories.

Introduction

The policy of the United States, as stated in the Small Business Act, is that small businesses and small businesses owned and controlled by socially and economically disadvantaged individuals are to have the maximum practi-

Procurement 372

Share of Federal Prime Contracts Dollars Awarded by Size of Firm, FY 1992

Source: U.S. Small Business Administration, Office of Procurement Assistance

If the SBA and an agency fail to agree on a goal, the Office of Federal Procurement Policy (OFPP) shall make the final determination.

At the end of each fiscal year, the head of each agency is to report to the SBA administrator on the agency's achievement of goals for the year, with appropriate justifications for failure to meet specific goals.²

Agencies must also consult with the administrator of the General Services Administration and set goals for prime contract awards to business concerns in labor surplus areas, as authorized in Public Law 96-302.

Section 503 of Public Law 100-656 requires that the report to the President include the number and dollar value of contracts awarded to business concerns owned and controlled by economically disadvantaged individuals through non-competitive negotiation, competition restricted to small disadvantaged concerns, competition restricted to small business concerns, and unrestricted competition. The SBA requested that agencies provide this information in FY 1992.

² Public Law 100-656 requires that the President include the information required from the agencies in each annual report to Congress on the state of small business. Appendix for detailed instructions provided to agencies.
