University of Wisconsin—Madison

March 29, 1982

Congressman James Sensenbrenner
315 Cannon House Office Building
Washington, DC 20515

Dear Congressman:

I want to urge your support for HR 1937, the Patent Termination Restoration Act of 1982, when it comes before the Judiciary Committee. I also urge you to make the provisions of this Act retroactive in order to enable owners of inventions covered by unexpired patents to recover research dollars which will provide the products of tomorrow. This Act recognizes that research leading to invention requires large amounts of money which are used to support institutions of higher learning.

When research grants from federal sources are down, as they are today, patent revenues which support other research become increasingly important. Because the University of Wisconsin is a leader in the pharmaceutical areas due to its pre-eminence in biochemistry and life sciences, this legislation is particularly important to us. The products of research in these areas benefit humanity by alleviating and curing human disease and suffering, in addition to bringing needed revenue to this campus.

The dollars which flow to us from patents are important for other reasons. They are discretionary, and not encumbered by strings of any funding agency. They can be used to balance the University's research efforts by providing support for new projects until alternate funding can be located.

I feel that passage of this Act is helpful, not only to the University of Wisconsin and other research universities, but to all the people, and I urge your support, both in Committee and in the House of Representatives.

Sincerely,

David A. Kindig, M.D., Ph.D.
Vice Chancellor for Health Sciences
Professor of Preventive Medicine
