Negotiation Strategies	

Common Mistakes in Negotiation 1. Poor Preparation 2. Irrational Commitment to Position 3. "Fixed Pie" Belief 4. Anchoring and Framing (1) Preparation · Preparation, Preparation, Preparation · Know the technology -Scope - Strengths/weaknesses - Design around? · Know competing technologies (same issues) Preparation (continued) · Know both businesses - What products? - What markets? - Costs and margins - Competing products/companies · What is your best alternative to no agreement ("BATNA")? · What is their BATNA?

Preparation (continued)

- · Know what you must have
- Even more important, know what you do not need
 - Know what you can safely trade for what you do need
- · Know what they must have
- · Know what they can give

Preparation (continued)

- · Assemble the negotiation team
 - Licensing executive
 - Attorney
 - Finance expert
 - Technical expert
- · A written outline is often helpful
 - Goals and expectations (more later)
 - "Deal breakers"

(2) Irrational Commitment

- \$20 Bill Auction
- Examples
 - Price wars
 - Automobile industry strikes
 - Competitive acquisitions
- Goal becomes defeating the opponent, not maximizing your own results

 The second second

Irrational Commitment (continued)

- · Boston Scientific/J&J fight for Guidant
 - J&J offered \$76/share (12/2004)
 - Guidant experienced serious product recalls
 - J&J invoked "material change" provision
 - J&J and Guidant negotiated a reduced offer of \$63/share (11/2005)
 - Boston Scientific (BSX) intervened with an offer of \$72/share (12/2005)

Irrational Commitment (continued)

- · Boston Scientific/J&J fight for Guidant (cont)
 - Both companies sweetened offers gradually to \$71/share for J&J and \$73/share for BSX (1/12/2006)
 - BSX jumped to \$80/share (1/17/2006), more than J&J's original offer price
 - Guidant accepted

Irrational Commitment (continued)

Boston Scientific/J&J fight for Guidant (cont)

(3) Myth of the "Fixed Pie"

- People often assume that a negotiation is a zero sum game, like chess or baseball
- This is a distributive model, in which one party gains only if the other party loses
- However, many (most) negotiations are not over a fixed pie.
- A multi-variable deal offers opportunities for trade-offs – an integrative model

Myth of the "Fixed Pie" (continued)

- By trading information, you can often find a way to increase the value of the deal to both parties
- The needs of the parties may not be in opposition
- Satisfying the need of one may not be at the expense of the other
 - Time vs. money

Myth of the "Fixed Pie" (continued)

- The "Fixed Pie" issue is often related to whether the negotiation is:
 - A "transaction"; or
 - A "relationship"
- A transaction may have a fixed pie, but a relationship hardly ever does

-

Myth of the "Fixed Pie" (continued)

- · Car purchase is the ultimate "transaction"
 - You will (most likely) never purchase another car from that dealer
 - Negotiation is (usually) on one issue price
 - Rational purchaser will get price information and choose lowest price for desired car
 - But dealer is trained to try to set up a relationship to increase his leverage

Myth of the "Fixed Pie" (continued)

- Marriage is the ultimate "relationship"
 - The couple is making a long-term (lifetime) commitment
 - All aspects of their life together will be negotiated
 - Fairness and respect for the other are critical
 - The "deal" will be continually modified as circumstances (and the individuals) change

Myth of the "Fixed Pie" (continued)

- A license agreement is a "relationship"
 - The parties are (normally) entering into a long-term arrangement
 - Many issues will be negotiated (and renegotiated)
 - Fairness is important
 - The parties' reputations may be affected by the deal
 - The parties may subsequently enter into another license

The state of the s

	_
	_
	_
	_
	-

Myth of the "Fixed Pie" (continued)

- Causes negotiator to devalue concessions by the other side
 - "If they proposed it, it must not be good for us"
 - The same proposal is viewed differently depending on source.

(4) Anchoring and Framing

- The rational negotiator will adjust position as the negotiation proceeds
- Better information will result in (e.g.) a different value for the deal
- Initial positions or opinions act as "anchors" and can prevent rational adjustment
- Example: Florida housing market 2005 present
 - Housing values in 2005 are an "anchor" inhibiting rational adjustment

Anchoring and Framing (continued)

- The answer you get depends on the parameters of the question you ask.
- 1) More or fewer than 10/1000 or more or fewer than 200/1000?
- · 2) So -how many do you think?
- Answer to question #2 is strongly affected by question #1 – 16.5/1000 vs 43.1/1000!

7

Anchoring and Framing (continued)

- Offers and counter-offers are anchors for the negotiation
- If an offer is much too low or too high, don't allow it to become an anchor
 - Rather, say that the offer is too low (or too high) to consider
- · House example lowball offer

Anchoring and Framing (continued)

- Licensor may initially set extreme terms in an attempt to set an anchor
- Initial terms have a strong influence on the final terms
- Making a counteroffer lends validity to the initial terms
- Better to walk away (or say "too low or high") than counteroffer

Anchoring and Framing (continued)

- Your goals can act as positive anchors for yourself
- · Set ambitious goals
- You never get more than you ask for initially

520000	
ent .	

Anchoring and Framing (continued)

- "Lightweight and inexpensive" vs. "flimsy and cheap"
- · Effort to save \$20 on purchase of an \$80 watch?
- Effort to save \$20 on purchase of an \$800 computer?
- Many people would do the first but fewer would do the second
- The value of the savings is "framed" by the value of the deal

A 1	
Negotiation	Foundations
racgonation	1 Odilddiolio

- 1. Style
- 2. Goals and expectations
- 3. Norms and standards
- 4. Relationships
- 5. Other party's interests
- 6. Leverage

(1) Negotiation Style

- · What is your style?
 - Avoider
 - Compromiser
 - Accommodator
 - Competitor
 - Problem Solver
- · Cooperative vs. competitive styles

H 10 - 10 - 10 - 10 - 10 - 10 - 10 - 10
MANAGEMENT AND ADMINISTRATION OF THE PROPERTY

Negotiation Style (continued)

- People with cooperative styles are often effective negotiators
- · But be careful of competitive counterparts
- · Every dog gets one bite
- · Trust but verify

(2) Goals and Expectations

- · Have high expectations
- People who expect more generally get more
 - -Supported by studies \$2.10/\$6.10 goals gave \$3.25/\$6.25 result
- If you do not know where you are going, you will probably not get there
- · Goal vs. BATNA

Goals and Expectations (continued)

- · Set an optimistic, justifiable target
- · Write it down be specific
- Consider what really matters
- More than (just) money
- · Focus on goal in negotiation

	NAMES OF THE PARTY	
<u> </u>		
W		
-		
-		

-		
	72170	
2000 FE		

(3) Norms and Standards

- · Everyone uses standards in negotiation
 - "Blue Book" for used cars
 - "Comparable sales" in real estate
 - "Standard" royalties
- Normative leverage
 - Rely on norms the other party views as legitimate and relevant
 - Focus on the other's normative framework

N	lorms	and	Stand	ards	(continued)
1.4	1011113	aniu	Otaliu	alus	(continued

- · Most norms are flexible
- · Be aware of prevailing norms
- Be prepared to argue for your end of the normative range

(4) Relationships

- · The norm of reciprocity
 - Be trustworthy
 - Be fair to those that are fair to you
 - Speak up when you think you have been treated unfairly
- · The importance of fairness
 - The ultimatum game
- · Build a working relationship

2. The second se

3 	
	-
200.0	

Relationships (continued)

- · Relationship traps
 - -Trusting too quickly
 - -Reciprocity traps
 - Negotiating with friends for high stakes

(5) Other Party's Interests

- Discover the other party's goals but hard to do
 - We see the world though our own eyes
 - All negotiators are somewhat competitive
 - Negotiation process itself makes it difficult to find shared interests
- Skilled negotiators spend more time looking for possible shared interests

Other Party's Interests (continued)

- · Identify the decision maker
- · Look for common ground
- · Identify interfering interests
- · Look for low-cost solutions

(6) Leverage

- Who has the most to lose from failure to agree? That party has the least leverage
- · Positive, negative and normative leverage
- · Positive ability to supply wanted thing
- · Negative ability to take away something
- <u>Normative</u> leverage based on norms and consistency

Leverage (continued)

- Positive leverage is most common
- Discover everything the other party wants or needs
- If applied against you, find another source

Leverage (continued)

- Negative leverage much less common threat based
- · "Do what I want or I'll [whatever]!"
- · Threats are dangerous
 - Possible counter threat
 - Raises emotional stakes

V					
-					
				-	
_					

Leverage (continued)

- · Normative leverage
- Depend on norms and standards to get leverage
 - Reciprocity: "You bought lunch, I'll buy the Cadillac."
 - Consistency
 - "Fairness"

Leverage - Misconceptions

- · Leverage and power are the same No
 - Negotiating with children: parents have all the power, but children have leverage
 - Vera Coking and Donald Trump: landowner holdout
- Leverage is a constant No, dynamic
 - Job hunter negotiation after offer but before acceptance, compared to other times

Negotiation Strategies

- Preparation is critical; most people do not prepare sufficiently
 - Be well informed about the other party so questions are intelligent
 - Remember BATNA;
 - · What will you do if no deal?
 - · What will the other side do if no deal?
 - Never negotiate a deal "at any cost"

*

Negotiation Strategies (continued) Preparation (continued) - Identify the true issues in the negotiation - Assess how important each issue is to you · Know what you must have · Know what you don't need - Estimate how important each is to the other - Set your expectations Negotiation Strategies (continued) · Distributive and integrative aspects - Single issue negotiation is only distributive · Car purchase - Identify the bargaining zone Dealer Customer - Customer today has better information Negotiation Strategies (continued) Distributive and integrative aspects (continued)

Integrative aspectsIdentify shared goalsIdentify where tradeoffs exist

· Multi-issue negotiations have both aspects

Negotiation Strategies (continued) · Strategies for finding trade offs - Build trust and share information - Ask many questions · Be patient - ask questions; verify assumptions Be a good listener – do not be afraid of silence · Always ask for "explanation" when there are differences - try to get at the root issues - Give away some information - Make multiple offers simultaneously Negotiation Strategies (continued) Strategies for finding trade offs (continued) - Use differences in expectations - Use differences in risk preferences - Use differences in time preferences - Consider adding issues Negotiation Strategies (continued) Process

- Be flexible - keep the goal in mind

Progress from general to specific
 Address non-financial issues first
 Address financial terms later

- Have high goals

Negotiating Strategies (continued) · Fairness and emotion - Negotiation is not just economics - Remember ultimatum bargaining - fairness - Price increase with demand - snowstorm - Effect of emotion on negotiator performance Conclusion · Negotiation is an art learned over a lifetime by constant application and practice · Everyone is a student **Negotiation Sources** · Bazerman and Neale - "Negotiating Rationally" • Shell – "Bargaining for Advantage"

Thank You !
